

The demilitarization and global secure destruction platform.

A 25-year operating foundation in custody destruction, assembled - through partnerships, acquisitions and internal engineering - into the full-service provider for munitions end-of-life across allied nations.

「 \$2.88T 」 → No platform

WORLD MILITARY EXPENDITURE, 2025 - AN ALL-TIME RECORD (SIPRI)

BUILT TO UNMAKE IT AT FOUNDER SCALE - UNTIL NOW

10-year growth plan, capital requirement and investment case. Contains modelled projections - not a solicitation of investment.

DISCLAIMER

Forward-looking statements, projections and sourcing

FORWARD-LOOKING STATEMENTS

Under legal review.

USE OF PROJECTIONS

Projected financial information is included for illustrative purposes only and should not be relied upon as indicative of future results. The assumptions underlying the projections are inherently uncertain and are set out in the accompanying financial model and supporting memo. No independent auditor has audited, reviewed, compiled or performed procedures with respect to the projections.

THREE KINDS OF NUMBERS

Every figure in this deck is one of three things, and is labelled as such on the slide or in the References: a VERIFIED figure cited to a named primary source; a COMPANY-PROVIDED figure from TWB's own records, marked "company figure"; or a PROJECTION / OUR CONSTRUCTION from the accompanying model. Where a figure could not be verified it has been removed or softened - see the fact-check log.

NO OFFER OR SOLICITATION

This presentation does not constitute an offer to sell or the solicitation of an offer to buy any securities, or a solicitation of any vote or approval, in any jurisdiction. Acquisition targets are described as capability categories only; named targets are held for diligence.

01

The foundation.

An operating business with twenty-five years of custody-destruction contracts, relationships on four continents, and the field doctrine the whole platform inherits. Not a whiteboard.

TWB Designs today: the operating base the platform is built on

Hamilton, Ontario. Owner-operated eMACS custody-destruction system in continuous service since 2001, with a US entity established and an allied footprint already in place.

25

YEARS IN SERVICE - EMACS, IN USE SINCE 2001, DEVELOPED IN A JOINT VENTURE WITH THE RCMP ¹

FRANKLIN COUNTY (OH) SHERIFF / HILLIARD PD TAKE-BACK, 2026 - COMPANY PHOTO

SCOPE

Small-arms ammunition to .50 calibre; seized narcotics and seized property (law enforcement); on-site, same day, operated inside the owner's perimeter.

FOOTPRINT

Canadian federal, provincial and municipal policing · US county law enforcement · agent agreement across seven Nordic and Baltic countries · allied and partner militaries on four continents (references under NDA).

STANDING

Canadian company - a DFARS 225.872 qualifying country for US defence acquisition ²; US entity established (company); Ontario MECP environmental compliance approval and TSSA field approval on the equipment (company).

WHAT THE Foothold GIVES THE PLATFORM

Twenty-five years of destruction records, references and process know-how; the custody doctrine every acquired capability will run on; and certification data that no fixed-site incumbent publishes.

¹ Officer.com product listing (2011): "designed in a joint venture between the Royal Canadian Mounted Police and TWB Designs... in use since 2001." ² DFARS 225.872-1. Deployment footprint, US entity and approvals: company-provided.

eMACS - mobile closed-chamber destruction, field-proven since 2001

A trailer-deployed two-stage combustion system: the unit goes to the ammunition, the material never leaves the owner's custody, and what comes out is graded metal - lead-antimony, brass, copper and steel, three of four now on the US Critical Minerals List ⁶.

EMACS TRAILER - PRIMARY CHAMBER, AFTERBURNER, FILTER CABINET, EXHAUST FAN, FILTERED EXHAUST (COMPANY DOCUMENTATION)

■ RECOVERY & STANDARDS - PENDING THIRD-PARTY VERIFICATION

TWO-STAGE CLOSED CHAMBER 850°F / 1,750°F Controlled air, containment and emission control - categorically not open burning under 40 CFR 260.10 ³.	THROUGHPUT PER UNIT ~1,000 lb / day Company figure; up to ~100 lb per one-hour cycle. Tested to .50 calibre.
MATERIAL RECOVERED 97% Of recyclable material per cycle - company operating figure; third-party verification to be published.	DEPLOYMENT Days, not months Trailer-mounted, 11,500 lb, Class V hitch, remote start/stop (company). Nearest comparable closed chamber: three-week deployment ⁴.
STANDARDS & APPROVALS CA EPA · NATO · EU Company states the system meets or exceeds these; Ontario MECP ECA; TSSA field-approved (company).	PROCESS KNOW-HOW & MOAT 25 years operational Real moat is field process know-how, permits, references and custody data - not the original patents (US 6,758,151 / CA 2,402,939), now expired ⁵.
INDICATIVE RECOVERY ~\$1,000 / day Company reference (2013): ~1,000 lb/day yields ~\$1,000 of clean reclaimed metal. Metal prices vary; indicative only ⁷. Pitched net of fee, never "cheaper" in the gross.	OUTPUT STREAMS 4 metal fractions Lead-antimony alloy, cartridge brass, copper/gilding jackets, ferrous - separated in one pass; no dollar-recovery table until third-party verification publishes.

³ 40 CFR 260.10 (eCFR). ⁴ Dynasafe SDC 1000: "deploys in three weeks". ⁵ Google Patents US6758151B2/CA2402939. ⁶ 90 FR 50494 (7 Nov 2025). ⁷ TWB press release, PRWeb, 6 Dec 2013. Throughput/recovery/standards: company figures pending third-party verification.

What the foothold has already done - in numbers

A small, debt-free operating base with real customers today - not a projection. Capital is what turns this into the platform, not what starts it.

CAD (combined, compiled)	FY2023	FY2024	FY2025
Revenue	965,730	1,711,261	862,856
EBITDA (approx.)	~419,000	~492,000	~235,000
EBITDA margin	43.4%	28.8%	27.2%
Net income	337,094	589,471	125,174

Combined TWB Designs Inc. + CADS, from compiled (unaudited) financial statements - a compilation engagement provides no assurance. Revenue, USD (BoC average): \$0.72M / \$1.25M / \$0.62M.

Debt-free at 31 Dec 2025: cash CAD 199,098, total assets CAD 628,018, book equity CAD 580,329, no interest-bearing debt. Services revenue declined ~20% across 2023-2025 as an intercompany fee and lumpy equipment sales moved the mix - disclosed, not smoothed; the raise is what reverses this.

OPEN DISCLOSURE ITEM

■ FLEET COUNT - NOT YET CONFIRMED

PUBLICLY REFERENCEABLE

Royal Canadian Mounted Police

JV partner; eMACS in service since 2001 ¹

Canadian municipal & provincial police

Multiple forces; ongoing programmes (company)

Why this team can win a regulated defence acquisition programme

A founder who has run the operating business for twenty-five years, and a strategic advisor whose Washington-level mandate maps directly onto the buyer, the material and the funding cycle this platform depends on.

FOUNDER

Tom Braithwaite

- Owner-operator of TWB Designs through the twenty-five years of eMACS deployment covered on the earlier foundation slides - the operating history, customer relationships and regulatory approvals in this deck are the founder's track record, not an acquired story.
- Built and holds the direct relationships this deck cites as references: the RCMP joint-development history, the US and Canadian law-enforcement customer base, and the allied and partner-nation military deployments described earlier.
- Leading the raise and the acquisition programme personally; sourcing, diligence and integration of the first targets run through the founder's existing network in the demil and destruction-equipment industry.

STRATEGIC ADVISOR

Joe Kasper

- Chair, REAlloys Advisory Board (NASDAQ: ALOY) · former Chief of Staff to the US Secretary of Defense.
- The buyer: TWB's core customer is the same institution Kasper served at the highest staff level - the Office of the Secretary of Defense.
- The material: his DoD-era mandate covered critical-material supply chains directly; he now chairs the advisory board of a critical-minerals company - the same recovery thesis TWB is built on.
- The process: a decade of Capitol Hill defence-appropriations experience maps to the Army demil line and NDAA funding cycles that anchor TWB's demand case.
- Status: agreed / in discussion (confirmed by Tom, 2 Sep 2026) - see the standalone advisor profile for full sourcing.

Kasper bio: REAlloys, Inc. team page and 30 Mar 2026 press release (Advisory Board Chair appointment); Chief of Staff tenure independently reported (Newsweek, Washington Times, Apr 2026). Full sourcing in the standalone advisor profile. Advisory relationship: company-confirmed, not yet publicly announced.

Competitive landscape: incumbents move the material; the platform moves the capability

Fixed-plant demil contractors, technology vendors and field-clearance teams each hold one piece. None combines mobile custody destruction, materials recovery, a police channel and an acquisition mandate.

- ON-SITE, INSIDE OWNER CUSTODY
Same day, zero transfers - the fixed-site incumbents (EnviroSafe, Rheinmetall, GD-OTS, D&Z) all move material off-site; Dynasafe's SDC is transportable but a multi-week deployment.
- POLICE / CIVILIAN CUSTOMER BASE
No demil competitor sells into law-enforcement destruction - TWB's only channel today, and the one none of the defence-focused incumbents has built.
- BUYS AND INTEGRATES OTHER CAPABILITIES
A stated acquisition mandate, not just organic growth - matched only by Rheinmetall's group-level M&A, at a completely different scale.
- DFARS-QUALIFYING-COUNTRY STANDING
Canadian company; qualifies for US defence acquisition under DFARS 225.872 alongside Sweden (Dynasafe) - most US incumbents don't need this, but it widens who can buy from TWB.

Full nine-company capability matrix, sourced line by line, is on the next slide.

TWB assessment from each company's public materials, September 2026 - see next slide for sources ¹¹⁻¹⁵. Positioning is illustrative (axis placement is TWB's own read of public materials, not a scored index).

Full comparison table - the nine-company capability matrix behind the positioning map

Fixed-plant demil contractors, technology vendors and field-clearance teams each hold one piece. None combines mobile custody destruction, materials recovery, a police channel and an acquisition mandate.

02

The opportunity.

A record rearmament has no end-of-life plan. Destruction was never industrialised, the incumbent method is being regulated out, and the outputs have just been repriced as strategic material.

Stockpiles are being rebuilt faster than the capacity to retire them

Unlike a rifle or a hull, ammunition must be destroyed to be retired. Three demand pools are converging on a destruction base that was sized for peacetime.

\$2.88T

WORLD MILITARY EXPENDITURE 2025 - ALL-TIME RECORD, 11TH CONSECUTIVE RISE (SIPRI) ¹⁶

65

ARMED CONFLICTS INVOLVING STATES IN 2025 - THE MOST SINCE RECORDS BEGAN IN 1946 (UCDP) ¹⁷

296,534 t

US MUNITIONS AWAITING DEMILITARIZATION, 4 DEC 2025 - >7,000 DODICS; ARMY FORECASTS GENERATIONS RISING FY27-31 ¹⁸

ALLIED STOCKPILE TURNOVER

Europe doubled military spending 2016-25 ¹⁶; NATO identifies \$145bn of munitions requirements and Allied production is up ~sixfold ¹⁹. Every new round is a future destruction obligation; expiring and orphaned calibres accumulate as rearmament turns stockpiles over.

POST-CONFLICT RECOVERY

Ukraine's explosive-hazard management need is put at US\$27.6bn for 2026-2035 across ~133,000 km² (RDNA5) ²⁰ - the first invoice of this war's end-of-life, not the last. Clearance produces ordnance that still has to be destroyed.

EVERY AGENCY, EVERY YEAR

Law-enforcement seizures, take-back events and expired duty ammunition accumulate in evidence rooms with no compliant disposal path - a persistent backlog in every jurisdiction served. The UN ran two procurements for mobile ammunition destruction in 2025 alone ²¹.

The structural gap: the world's demil capacity is fixed-plant, centralised and permitted over years. Ordnance is distributed, hazardous to move and accumulating now.

¹⁶ SIPRI Fact Sheet, Apr 2026. ¹⁷ Davies, Pettersson & Öberg, JPR 2026. ¹⁸ Army FY2027 Procurement of Ammunition J-book, line 4099EP1700; PD Demil, NDIA Oct 2025. ¹⁹ NATO Annual Report 2025 briefing. ²⁰ RDNA5, Feb 2026. ²¹ UNGM RFIUNPD23632 / EOIUNPD23750.

Destruction never industrialised - and the incumbent method is being regulated out

The status quo is a pit, a truck, or a pair of hands. Fixed plants cannot reach where the ordnance is.

BURN IT IN A PIT

Open burning / open detonation - combustion with no containment and no emissions control. Roughly \$750/ton ²², and the EPA's proposed rule (89 FR 19952) targets the 67 US facilities still doing it; a final rule is projected for late 2026 ²³.

TRUCK IT AWAY

Live ammunition loaded onto highways to reach a permitted depot. Every mile a diversion window; every transfer a custody break; every escort a cost the owner carries.

DO IT BY HAND

Los Angeles County, 18 July 2025: three sheriff's detectives killed processing seized ordnance ²⁴. The default when nothing else is on site.

Dimension	Mobile custody system (TWB)	Fixed-plant demil
Deployment	On site - the unit goes to the ordnance; material never leaves the owner's perimeter	Fixed depot - ordnance shipped to the plant
Time to operational	Days - trailer-deployable, minimal site preparation (company)	Months to years - permitted infrastructure
Capital intensity	Low - single-unit capital cost	High - large-scale fixed-plant investment
Ideal use	Distributed bases, police agencies, allied nations, surge capacity	Centralised national stockpile reduction

Why this matters for the venture: a mobile, low-capex unit is the form factor that serves allied militaries, distributed bases, police forces and reconstruction zones without waiting years for a plant - and the platform adds the fixed and containerised tiers by acquisition rather than by declaring them out of scope.

²² Army estimate cited in National Academies (2019), Alternatives for the Demilitarization of Conventional Munitions. ²³ 89 FR 19952 (20 Mar 2024); EPA programme page; Unified Agenda RIN 2050-AH24. ²⁴ CBS Los Angeles, 18 Jul 2025.

Geopolitics turned the waste stream into an ore body

Open a round and it is mostly metal: a brass case, a copper jacket, a lead-antimony core. Washington has now listed all three metals as critical.

~5x

ANTIMONY PRICE MOVE FROM EARLY 2024 TO THE MID-2025 PEAK (~\$60,000/T) AFTER CHINA RESTRICTED, THEN BANNED, EXPORTS TO THE US (USGS) ²⁵

Cu

COPPER

Added to the US Critical Minerals List, November 2025 ⁶ · LME ~\$14,000/t (Aug 2026) ²⁶

Pb

LEAD

Added to the US Critical Minerals List, November 2025 ⁶ · LME ~\$1,900/t (Sep 2026) ²⁶

Sb

ANTIMONY

On the list since 2022; China-restricted 2024; USGS 2025 average ~\$25/lb, more than double 2024 ²⁵

An allied depot is an above-ground deposit of exactly the metals the West just declared strategic - already mined, already refined, already inside a guarded perimeter. Done in a closed chamber with recovery, destruction stops being a grudge purchase: paid once to make the liability cease to exist, paid again for the material that comes back - and the buyer's net cost of destruction falls with every ton the recovered metal offsets.

Policy direction: the US Export-Import Bank approved a \$2.9bn loan in May 2026 for a domestic antimony source ²⁷; GAO (July 2026) frames domestic recycling feedstock as a critical-minerals priority ²⁸. Recovery economics are underwritten only where the material is the customer's or ours to sell.

²⁵ USGS Mineral Commodity Summaries 2026 - Antimony. ²⁶ LME / COMEX via Trading Economics, NAI500 (Aug-Sep 2026). ²⁷ Perpetua Resources, 21 May 2026. ²⁸ GAO-26-108687.

The end-of-life bill of a \$2.88 trillion rearmament

No published analyst coverage exists for munitions end-of-life. The market below is constructed layer by layer, each layer labelled sourced or assumed, and SOM is the model's own revenue - not a top-down share.

TAM

\$5.2B / yr

Allied munitions end-of-life: destruction & demil services, EOD services, mine action, sovereign facility engineering, recovered materials - forming annual spend, 2026

SAM

\$2.2B / yr

North America + Europe: small-arms-through-artillery destruction, materials recovery and plant engineering - the scope the roadmap assembles (60% geographic × 70% access factors)

SOM

\$137M / yr

The model's Year-5 (2031) revenue - foothold plus first assembly; 5.4% of Year-5 SAM

Plus the episodic layer, already priced: Ukraine explosive-hazard management need \$27.6B for 2026-2035 (RDNA5) ²⁰ - ~\$2.8B/yr on average, sitting on top of the forming annual market.

HOW THE TAM IS BUILT (USD M / YR, 2026)	
US Army conventional demil line (FY26)	155 sourced ¹⁸
Other US DoD / federal destruction & demil services	150 assumed
Allied national demil & stockpile-destruction budgets	450 assumed
LE, civil & commercial secure destruction (NA + EU)	100 assumed
EOD services share of the \$8.55bn EOD market (30%)	2,565 size sourced ²⁹
Humanitarian mine action funding	1,070 sourced ³⁰
Sovereign end-of-life facility engineering	500 assumed
Recovered materials sold into secondary markets	250 assumed
TAM forming, blended growth ~3%/yr	5,240

²⁹ Global Growth Insights, EOD market \$8.55bn (2025), 3.03% CAGR. ³⁰ Landmine Monitor 2025 (\$1.07bn, 2024). All "assumed" layers are placeholders to be hardened in diligence - Market tab of the model.

The world's largest demil buyer is recapitalising - and buying the fixed-site model

Verified US budget lines and awards behind the constructed market. The Army funds a dedicated demil line every year, is recompeting its commercial demil vehicle in 2026, and just signed a 20-year depot contract.

\$161M

US ARMY CONVENTIONAL MUNITIONS
DEMILITARIZATION LINE, FY2027 REQUEST
(\$155.1M FY2026) - 31,475 TONS FUNDED ¹⁸

COMMERCIAL DEMIL VEHICLE

~\$30M / yr

PM Demil plans a competitive Conventional Ammunition Demil IDIQ for 2026-2030; the prior \$110.1M three-awardee contract (GD-OTS, EnviroSafe Demil, Expal USA) ended May 2026 ³¹.

HAWTHORNE ARMY DEPOT

\$2.30B / 20 yrs

Day & Zimmermann, June 2026: operation, maintenance and modernisation of the depot including demil of specified ammunition families, to December 2046 ³² - the incumbent fixed-site model, priced.

REGULATION

67 facilities

EPA's proposed OB/OD rule identifies 67 facilities with operating open-burn/open-detonation units; final rule projected 2026 ²³. The cheapest incumbent method is being closed.

ALLIED & MULTILATERAL

UN · NATO · MoDs

UN procurements for containerised mobile ammunition destruction in 2025 ²¹; NATO \$145bn munitions requirements ¹⁹; UK MoD EOD & Search framework pipeline £23M ³³.

Every figure on this slide is a primary-source budget line, award or procurement notice; the platform does not claim any of these vehicles today.

³¹ Hrycak, PD Demil, NDIA Global Demil Symposium (Oct 2025); DoD contract announcement 21 May 2021. ³² DoD Contracts for 9 Jun 2026 (W519TC-26-D-A018). ³³ Defence Online, 27 Aug 2026.

03

The platform.

Acquire, partner and develop the scattered capability of munitions end-of-life into one counterparty that an allied government can call - with the foothold's custody doctrine running through all of it.

Assemble the platform: full service, one counterparty

The capability to unmake the world's munitions already exists - scattered across founder-held specialists, most founded in the 1980s and 90s, each holding one capability, one site, one generation of know-how. What has never existed is the company.

Acquire

Buy the back of the lifecycle while it is cheap. Founder-held specialists at a succession cliff; permits, past performance and tribal knowledge priced like plumbing at 4-7x EBITDA

³⁴

Partner

Import what the industry never had: robotics off the most dangerous work, universities for sensing and materials science, technologies from outside demilitarization entirely.

Develop

Build what the market does not sell: extend our own destruction technology up the calibre ladder and into containerised and fixed formats, and own the certification and custody-data layer.

THE FULL-SERVICE CATALOGUE - SIX LINES, ONE COUNTERPARTY

Deployable custody destruction

Mobile, on-site, same-day, inside the owner's perimeter - operating today

Large-calibre & artillery demilitarization

The tonnage end of the market, up the calibre ladder

Materials recovery & reclamation

Critical minerals returned to allied supply

Plant & equipment engineering

Design-build of sovereign end-of-life facilities

Automated & unmanned processing

Robotics and sensing over the dangerous work

Certification & chain-of-custody data

The audit standard for the category

Governments already buy every line - separately, from single-capability vendors. The platform sells the lifecycle. Capability categories only at this stage; the target work is done and held for diligence.

³⁴ GF Data 2025 (sub-\$10M TEV 5.5x; \$10-25M 6.4x); Pepperdine PCMR 2025 (4.0-8.3x). Disclosed sector transactions 2023-26 cleared 1.5-3.4x revenue (Cadre, Rheinmetall-Expal).

Technology roadmap: from small arms to full-spectrum demilitarization

Each stage bolts onto the mobile closed-chamber platform rather than replacing it - added through partnerships, acquisitions and internal engineering. Enabling tracks run continuously underneath.

Roadmap and geographic sequencing: company plan (projection). Academic separation licence: in discussion; sensing partner: to be confirmed. Chemical-weapons demil (August-plan optionality) withdrawn: OPCW-controlled, off-strategy. Delivery mode per stage set deal by deal.

Foothold to full service in three phases - each phase funds and de-risks the next

The phase ladder is the use-of-proceeds logic. Capital required per phase is the equity the model draws to keep the plan funded, on a fully equity-funded basis (no acquisition debt).

CAPITAL BUILD-UP - FULL PLAN, 2026-36 (RAISED EQUITY PLUS SELF-FUNDED OPERATING CASH FLOW)

ACQUISITIONS	INTEGRATION	FLEET & CAPEX	DEVELOPMENT	WORKING CAPITAL	CORPORATE PLATFORM
\$82.7M	\$8.3M	\$50.3M	\$21.6M	\$40.9M	\$3.3M

Projection - TWB financial model, P&L & Capital tab (equity funding drawn by phase; use-of-funds build-up by category). Total equity drawn 2026-2036 in the base case: \$49M; the balance of the build-up is self-funded from platform cash flow. Acquisition consideration priced at 5.0-6.0x EBITDA; at a 2.0x-revenue stress price the programme costs \$180M rather than \$83M.

04

The investment case.

A sourced market, an operating foothold, a capital plan priced at real multiples, and a returns case that does not depend on a mismatched discount window.

Total revenue: build vs. buy - capabilities assembled to meet the corporate objective

Two ways capability gets added to the platform: build it ourselves (fleet-driven custody services, equipment, allied and post-conflict programmes, metals recovery), or buy it - six capability acquisitions, priced at founder-scale multiples, adding the tonnage tiers a build-only path reaches too slowly.

Pace matters as much as volume: the downside case delays every deal a year and drops two - Year-10 revenue falls to \$115M. Margin path: Adjusted EBITDA margin is modelled to reach 30% by Year 5 and 35% by Year 10 as fleet utilisation, acquisition integration and corporate operating leverage scale - a stated planning assumption (Tom, 3 Sep 2026), not a bottom-up cost build.

Projection - TWB financial model, base case (Outputs tab). Acquired revenue: entry revenue \$10-20M per deal growing 12%/yr post-close. Margin path: company-directed planning assumption (30% by Year 5, 35% by Year 10), overriding the bottom-up corporate-cost build - see the model's Inputs tab. Every figure on this slide is a modelled assumption, not a forecast of results.

Capital required - sized from the plan

The model draws equity only when cash would otherwise go below zero. The programme is front-loaded into the acquisitions of Phase 2 and 3 and becomes self-funding by 2032 in the base case.

\$49M

TOTAL EQUITY FUNDING DRAWN 2026-2036, BASE CASE
- PEAK CUMULATIVE REQUIREMENT

BY PHASE - 2026-27 · 2028-29 · 2030-31 · 2032-36

PHASE 1	PHASE 2	PHASE 3	LATER
\$2.0M	\$41.5M	\$5.8M	\$0.0M

THE INITIAL RAISE IS SIZED AGAINST PHASE 1

The full \$49M equity requirement runs through Year 10; \$10M is confirmed now as the initial raise. Structure, use of proceeds and milestones funded - next slide. Stress case: at 2.0x revenue the acquisition programme costs \$180M rather than \$83M.

The ask: \$10M initial raise - this gets us from foothold to first acquisition

Confirmed 2 September 2026. This capital funds Phase 1 in full and reserves toward diligence and a first-acquisition LOI - it does not fund an acquisition close. Six-deal, ten-year plan is the upside this raise sets up, not what it buys outright.

\$10M

INITIAL RAISE - ROUND 1 · CONFIRMED AMOUNT

■ CONFIRMED

INSTRUMENT

■ PENDING

Equity - structure (common / preferred / convertible) to be finalized with the lead investor. Working assumption only; not yet set by the company.

VALUATION

■ PENDING

To be set through negotiation with the lead investor. The returns-case and comp framework (this deck) is offered as the reference point, not a quoted price.

TARGET CLOSE

■ PENDING

To be confirmed once a lead investor is identified. No date is fixed at this stage.

USE OF PROCEEDS

Working capital

\$1.97M

Fleet build-out, platform team, certification layer, first allied-programme delivery - fully funds the model's Phase 1 (2026-27) requirement.

US expansion & scaling to larger-format munitions

\$8.03M

The first steps identified in the development plan: standing up the US entity's operating footprint, and moving up the calibre ladder toward large-calibre and artillery demil.

This raise is 23% of the full Phase 1 + Phase 2 requirement - it buys the next 18-24 months, not the acquisition programme.

MILESTONES THIS RAISE FUNDS

- Phase 1 revenue growth on the existing fleet, US entity fully operational
- Third-party emissions/recovery-rate testing commissioned and published
- First allied or law-enforcement contract signed under the raise
- Diligence complete and LOI signed on the first acquisition (large-calibre & artillery)
- Round 2 sized and launched against a priced, de-risked first deal

The comp universe: TWB's 2028 forecast, priced against a fundamentals anchor and a story anchor

There is no liquid public comp for mobile ammunition destruction. Rather than fabricate a wide universe, the closest genuine proxies are used - TWB's own 2028 forecast is then run through each comp's multiple to show where the platform is priced today.

2028 FORECAST

\$36.0M revenue · \$2.7M adj. EBITDA (7.5% margin)

At disclosed founder-scale revenue multiples (1.5–3.4x), the 2028 forecast implies \$54M–\$122M of enterprise value - in line with Cadre's own 2.36x and a steep discount to ABAT's 19.7x story premium. EBITDA margin is still well below the plan's long-run target at this stage (Phase 2 build-out, before the modelled ramp to 30% by Year 5); an earnings multiple only becomes meaningful once margin scales - see the valuation-framework reference slide for the Year-7 (2033) comparison at \$68.4M adjusted EBITDA.

Cadre Holdings (NYSE: CDRE)

THE FUNDAMENTALS ANCHOR

TTM revenue	\$685.7M
EV / revenue	2.36x
EV / EBITDA	15.3x
P/E	36.3x

EOD equipment, body armour, law-enforcement and first-responder markets; 18 acquisitions to date, including ICOR (EOD robots, Ottawa) at ~2.3x revenue. Profitable, trades on fundamentals - what the platform can look like after the story plays out ³⁶.

American Battery Technology (NASDAQ: ABAT)

THE STORY-PREMIUM ANCHOR

TTM revenue	\$16.3M
EV / revenue	19.7x
EBITDA	negative
Net loss (TTM)	\$63.6M

Critical-minerals and battery recycling, richly valued on narrative and government backing. Shows how much multiple an early-stage critical-minerals story can command - and why this deck does not price itself that way ³⁷.

Founder-scale private market

WHERE THE ACQUISITIONS ARE PRICED

Sub-\$10M TEV	5.5x EBITDA
\$10-25M TEV	6.4x EBITDA
Pepperdine 2025 range	4.0-8.3x
Private A&D deal median	19.0x (large)

The programme prices founder-held specialists at 5.0-6.0x EBITDA. Disclosed sector transactions 2023-26 (Cadre, Rheinmetall-Expal) cleared 1.5-3.4x revenue - the 2.0x stress case ^{34 35}.

Projection - TWB financial model, base case (Outputs tab), 2028 revenue and adjusted EBITDA. ³⁶ stockanalysis.com, Cadre Holdings statistics, 31 Aug 2026; Cadre press releases (ICOR, Alpha Safety, Carr's). ³⁷ stockanalysis.com, ABAT statistics, 26 Aug 2026. Private multiples: GF Data 2025 via CapitalPad; Pepperdine PCMR 2025; PCE Q2 2026.

Four clocks, all running. None of them re-opens.

4

CLOCKS CONVERGING

01 • Rearmament

Surge production is compounding allied stockpiles - today's shells are tomorrow's destruction queue. \$2.88T spent in 2025; Europe doubled in a decade ¹⁶.

02 • Regulation

The EPA is closing open burn / open detonation - 67 facilities targeted, final rule projected 2026 ²³. The incumbent method is being outlawed in real time.

03 • Critical minerals

Copper and lead added to the US list in 2025, antimony repriced ~5x by policy ^{6 25} - the output of destruction became strategic feedstock.

04 • Succession

The founder generation that holds the capability is retiring - pricing the M&A at 4-7x EBITDA ³⁴, for now. Strategics are already buying the large end ³⁸.

Any one clock is a tailwind. All four at once is a category being born.

³⁸ Diehl Defence-Tauber (Oct 2025), Diehl-EST Energetics (Jul 2026), Arca Defence-Esplodenti Sabino (Oct 2025), Rheinmetall-Expal (2023), Cadre (18 acquisitions).

Every war ends. Every stockpile ages. Every round, one day, must be unmade.

The need

Stockpiles rebuilt faster than the capacity to retire them; a fixed-plant industry being regulated out; the US alone funds \$155-161M of demil a year and holds 296,534 tons in the queue.

The foundation

Field-proven since 2001; police, allied-military and agent relationships on four continents; a US entity established; a custody doctrine fixed-site incumbents cannot easily retrofit.

The platform

Acquire, partner and develop the scattered capability into one counterparty - six service lines, three phases, from foothold to the sovereign full-service offer.

The plan

Organic growth plus six capability acquisitions to \$342M of revenue by Year 10 - the upside case; \$49M of equity over the full plan, front-loaded into Phases 2-3, self-funding from 2032.

The returns

15.0x / 76% at a Year-7 exit on a 10x multiple in the base case - a sourced methodology applied on a matched horizon, without the mismatched discount window.

The decision

A \$10M initial raise, confirmed, that funds Phase 1 in full and reserves toward a first-acquisition LOI - the specific, near-term decision in front of an investor today.

The round: \$10M initial raise · funds Phase 1 + first-acquisition diligence/LOI · milestones set the Round-2 trigger · structure and close timing to be finalized with the lead investor.

The decision in front of you: back the operating foundation and the near-term milestone plan now, at the initial-raise size - the ten-year platform is what that decision compounds into.

How we value the platform - and how we don't

A returns case first, a comp-anchored future value as a cross-check. The August method is retained, corrected: real multiples, a venture-grade discount rate, and a window matched to the horizon.

1

Build a comp universe

Named public companies and disclosed transactions in defence services, EOD and secure destruction - plus the founder-scale private market where the acquisitions are actually priced.

2

Take the multiples

Public A&D government services ~11.2x EV/EBITDA (KPMG, end-2025); Cadre trades 15.3x; private A&D deals 19.0x median (PCE) as an upper reference; lower-middle-market private 5.5-6.4x^{34 35}.

3

Run the returns case

Exit at Year 5 or Year 7 at 10x adjusted EBITDA (base). Equity funded per the capital plan, no leverage. MOIC and IRR against the capital actually drawn.

4

Cross-check the future value

Year-10 EBITDA from the operating model - not a hard-coded 20% margin - times the comp range, discounted ten periods at 25%.

5

Use as the reference point

The returns case sets the conversation; the discounted future value is the floor test. Neither is a deal price.

Why the discount window matches the horizon: discounting a Year-10 estimate back fewer periods than the years actually projected mechanically inflates the implied value. At a venture-grade 25% over ten periods the cross-check is deliberately hard - which is why the returns case at a Year-7 exit, not the ten-year bridge, is the lens that fits a platform built by acquisition.
