

CONFIDENTIAL INFORMATION MEMORANDUM

TWB DESIGNS

**Field-Proven Mobile Demil.
Ready for the U.S. Warfighter.**

Strategic Acquisition Opportunity • Mobile Ammunition Combustion & Demilitarization Technology

2001

IN CONTINUOUS SERVICE SINCE

50 CAL

MAX ORDNANCE HANDLED

U.S. DoD

CONTRACT ENGAGEMENT IN PROGRESS

A Proven Platform, Built for U.S. Scale

25 years field-proven

In continuous service since 2001; co-developed with the Royal Canadian Mounted Police.

Active U.S. DoD engagement

Contracting with the U.S. military currently in progress — a live entry point into the world's largest demil market.

Allied-military footprint

Deployed with allied forces and law enforcement across three continents; Nordic & Baltic distribution in place.

Standards-ready for U.S. procurement

IACP Innovation Award; engineered to California EPA and NATO air-handling emissions standards.

THE OPPORTUNITY

A ready-made, qualification-tested mobile demil capability for a U.S. prime, demil specialist, or defense-focused PE platform — acquired ahead of a U.S. contract milestone rather than built over years in-house.

The Largest Demil Market on Earth Is Recapitalizing

Recent U.S. Army awards show sustained, multi-year demand for conventional ammunition demilitarization capacity.

Major U.S. Army demil / munitions depots (illustrative)

\$808.8M

U.S. Army Conventional Ammunition Demilitarization IDIQ program value — multiple awards for demil of 20mm/40mm cartridges, fuzes, mortars, flares, rocket motors and cluster munitions, with periods of performance running through 2026–2027.

Source: U.S. Army Contracting Command — Rock Island

\$2.30B

Firm-fixed-price award (June 2026) for operation, maintenance and modernization of Hawthorne Army Depot, including demilitarization of specified ammunition families.

Source: DoD Contracts, June 9, 2026

Small-business set-asides

The Army has explicitly reserved IDIQ capacity to bring new entrants into the demil industrial base — the exact opening a mobile, low-CAPEX capability is designed to fill.

Source: U.S. Army Contracting Command — Rock Island

THE TECHNOLOGY

eMACS / MACS — Mobile Combustion, Engineered for the Field

Two-stage combustion

≈850°F primary chamber, ≈1,750°F afterburner — clean, low-emission destruction.

Metal recovery built in

Lead and brass separated automatically for recycling revenue.

Trailer-deployable

11,500 lb towing weight; Class V hitch; on-site in days, not months.

Armored & interlocked

3/8" plate-steel shell, over-pressure relief, remote start/stop.

60 lbs/hr

MACS throughput

~1,000 lbs/day

eMACS capacity

50 CAL

Max calibre

EPA • NATO

Emissions standards met

Every Round Becomes Saleable Metal

Combustion separates ammunition into clean, graded metal streams — turning a disposal cost into a revenue-generating process.

Lead + antimony

Cores are a Pb–Sb alloy; the recovered ingot is sought by secondary lead smelters (battery-grade feedstock).

Brass & copper

Cartridge brass and copper jackets are among the highest-value non-ferrous scrap grades.

Operator economics

TWB reference: ~1,000 lb of small-arms ammunition per day yields roughly \$1,000 of clean reclaimed metal.*

Environmental

Off-gas treated through the ~1,750°F afterburner; process meets California EPA and NATO air-handling standards.

Recovered metals are graded on-site and sold at best available scrap prices — a direct cost offset for the operator. Illustrative: the large majority of small-arms ammunition mass is metal (brass, copper, lead) recoverable as clean scrap.

*TWB Designs press release, 2013 — metal prices vary; figure is indicative only.

Mobile-First — Reaching Where Fixed-Plant Demil Can't

DIMENSION		TWB MOBILE SYSTEM	FIXED-PLANT DEMIL
	Deployment	Mobile / on-site — the unit goes to the ordnance	Fixed depot — ordnance shipped to plant
	Time to operational	Days — trailer-deployable, minimal site prep	Months to years — permitted infrastructure
	Capital intensity	Low — single-unit capital cost	High — large-scale fixed plant investment
	Ideal use case	Distributed bases, allied nations, surge capacity	Centralized national stockpile reduction

Recognized by the International Association of Chiefs of Police (IACP) with a Competitive Innovation Award for the eMACS platform.

Two Decades of U.S., Allied & Partner-Nation Deployment

U.S. and Canadian law enforcement, allied and partner-nation military, and government relationships — details under NDA

TWB system — Franklin County (OH) Sheriff / Hilliard PD take-back day

TWB operator with remote start/stop unit

PUBLICLY REFERENCEABLE

Franklin County (OH) Sheriff's Office & Hilliard Division of Police

U.S. law enforcement — ammunition take-back events

Royal Canadian Mounted Police (RCMP)

Co-development partner; MACS in service since 2001

Canadian municipal & provincial police services

Multiple forces; ongoing disposal programs

Canadian Ammunition Disposal Services (CADS)

Affiliated managed-service operator, Canada-wide

Military Equipment Denmark A/S

Exclusive agent — Nordic & Baltic (7 countries)

ALLIED & PARTNER MILITARY — NDA ONLY

Australian Army

Australian Defence Force — U.S. treaty ally (ANZUS)

New Zealand Army

New Zealand Defence Force — U.S. treaty ally (ANZUS)

Royal Saudi Land Forces

Saudi Arabian Armed Forces — U.S. strategic partner

Deployments with allied and partner-nation forces demonstrate operation to military standards outside Canada. Contract references, scope, and dates available under mutual NDA; buyer diligence may verify directly with end users, subject to end-user consent and TWB coordination.

Flags stylized for presentation.

Why an American Acquirer Wins With TWB

STATUS TODAY

- U.S. military contracting engagement currently in progress.
- Mobile, low-CAPEX model directly answers the Army's stated intent to bring new entrants into the demil industrial base.
- Compliance base (NATO air-handling, EPA-aligned emissions) already built to the U.S. regulatory bar.
- Allied-military reference base (AUS, NZ, KSA, Canada) de-risks U.S. procurement evaluation.

ACQUIRER FIT

■ U.S. primes & munitions divisions

A tuck-in mobile capability that rounds out a fixed-plant demil portfolio ahead of recompetes.

■ Demil / EOD specialists

Field-deployable capacity for distributed bases and surge — complementary, not competitive.

■ Defense-focused PE platforms

A qualified technology with a live U.S. contract path and allied references — a clean platform add.

Flexible on Form. Firm on Outcome.

A clean strategic exit for the shareholders

PREFERRED PATH

100% equity sale to a single strategic acquirer — full transfer of technology, contracts, IP, and operating team.

CONSIDERATION

Open to cash, acquirer stock, or a structured mix — including performance-linked consideration tied to U.S. contract award and delivery milestones.

TIMING

Engagement intended to align with confirmation of the U.S. military contract, maximizing value visibility for the acquirer at signing.

DILIGENCE READY

Technology documentation, customer references (NDA-gated), and contract status available to qualified, NDA-bound counterparties.

Let's Talk.

Qualified strategic and financial acquirers are invited to execute an NDA to receive the full data room — customer references, technical documentation, and U.S. contract status.

TWB Designs Inc. | Hamilton, Ontario, Canada

Advisory contact and NDA execution details to be provided by engaged M&A advisor.
