

Everyone who destroys ammunition, and what each of them can and cannot do.

A complete profile of the companies TWB competes with, sells alongside, or would have to buy — built from contract awards, solicitations, registry filings, annual accounts, insolvency records and the competitors' own datasheets. Almost every operator in this market is private; where a figure is not public, this brief says so rather than estimating.

64

Company profiles, 80+ named entities

7

Tiers, by collision with TWB's actual position

3

Direct collisions — companies selling the same sentence

24

Acquisition candidates flagged, seven ranked

PREPARED FOR

TWB Designs Inc. — investor deck and positioning workstream

SOURCING

Primary sources throughout. Every company name links to its site; figures link to the filing or award.

CURRENCY

USD unless stated. FX at ECB annual averages, year noted.

Tiering is by collision, not by size.

A \$52bn prime that cannot come to your site is a smaller threat than a four-person company in Las Vegas that already does. The tiers below rank by how directly a company contests TWB's actual position — on-site destruction of small arms ammunition inside the owner's perimeter — rather than by revenue, headcount or tonnage.

The four things this brief establishes

- **The custody wedge is real, and it is narrower than the deck assumes.** Every company profiled here either takes the material away or takes days to weeks to arrive. That claim is now sourceable to a competitor's own datasheet. But three companies contest it directly, and one of them holds structural advantages in the US that a Canadian entity legally cannot.
- **Throughput is a losing axis and it is already being used against TWB.** One competitor markets itself as "9× faster than the leading mobile small-arm ammunition system." Another sells a trailer-mounted furnace at 10,000 lb/hr — 167× TWB's rate — from a 45-year incumbent. The reframe to rounds-destroyed-without-a-transfer is not a preference; it is the only survivable frame.
- **The acquisition thesis is priced wrong.** Every disclosed transaction in demil, EOD and hazardous destruction over 2023–26 cleared **above** the model's 1.2× revenue assumption. The real band is 1.5×–3.1× revenue, and the sector's most experienced small-cap acquirer has never bought anything below 1.40×.
- **Seven names should come out of the competitor set.** Carrying a company that does not do this work is the fastest way to lose a technical reader.

Field conventions

- **Revenue** — a filed or reported figure where one exists, with the year and the source. Where a company is private and files nothing, the field reads *Not disclosed*. Where a band is offered, it is marked **[est.]** and the derivation is stated. Third-party aggregator estimates (ZoomInfo, PitchBook) are labelled as such and should never be repeated as fact.
- **Services** — what they actually destroy, by munition class, plus the process and whether it is **mobile** or **fixed-site**. Where a competitor publishes a deployment time or throughput, it is quoted verbatim so it can be cited.
- **Contracted with** — named customers and contract vehicles, with an IDIQ *ceiling* always distinguished from obligated spend. This distinction has been a recurring source of error in TWB's own materials.
- • beside a name in the index marks a company that changes a decision — a live competitive threat, a correction to existing material, or an acquisition candidate worth acting on.

Every company in this brief — and the twenty-four worth buying.

Sixty-four profiles across seven tiers. Before the list, the acquisition read: which of these a platform should actually own, and in what order.

What the platform should be buying — and what it should stop calling a target

This set has been re-cut away from direct small-arms and law-enforcement competitors and toward **large-calibre and artillery demilitarization, materials recovery, and the engineering houses that build the plant**, across North America and Europe, plus commercial secure destruction for military and conflict customers. LSC Destruction, GunBusters and Firelake have come off the target list — they remain profiled in Tiers 1 and 4 as competitors and channel, which is what they are. The test applied is not “could we buy this” but **does it add a capability the platform cannot build faster itself, and is it actually available**. That second half eliminated a great deal: Expal sits inside Rheinmetall, GD-OTS inside General Dynamics, Arcwood inside EQT, Tauber and EST Energetics went to Diehl during the research window, and Esplodenti Sabino was taken by Turkey’s ARCA Savunma in 2025.

- **1st — JAKUSZ (Kościerzyna, Poland)**. Builds complete ammunition disposal factories in **containerised or fixed form**, covering 5.45–203mm plus mortars to 240mm, rockets, mines and air-launched ordnance. This is TWB’s own business model two calibre bands up. Owner-named, founder-held, 41 years, already second generation, single site — the succession signal is explicit.
- **2nd — Josef Meissner (Cologne)**. Waterjet washout for shells, bombs and rocket motors to 203mm, **warm-water TNT recovery and HMX/RDX recovery from mixed fills**, plus blasting chambers and incineration plant for fuzes and initiators. A century old, third generation, with a non-family managing director already installed. Recovery IP is the asset class that appreciates under the Army’s own “demil as a source of supply” direction. Carve-out negotiation, not a clean company purchase.
- **3rd — Alford Technologies (Trowbridge, UK) and El Dorado Engineering (Utah)**. Alford has the cleanest cap table found anywhere — one individual holding 75%+, founder deceased five years, second-generation MD 20+ years in, and a 2023 restructuring that reads as either succession planning or sale preparation. It lets TWB destroy in place what the chamber cannot take. El Dorado stays for the transportable furnace line and, more importantly, the RCRA permitting and air-modelling practice that is the real constraint on entering any new jurisdiction.
- **4th — Interco Trading (St. Louis)**. The only business found that publicly advertises buying **demilled military ordnance, tactical munitions and artillery shells**. Thirty years, three sites, no PE parent, 10,000+ tons of non-ferrous a month. Converts destruction output into a priced revenue line on day one — including segregating gilding metal onto copper content instead of dumping it into mixed brass.
- **5th — Lacero Solutions (Mississauga) and Gradient Technology (Minnesota)**. Lacero is the best Canadian fit in the whole scan: certified pyrotechnic destruction with barcode chain of custody and certificates of destruction, 45 minutes from Hamilton, blue-chip automotive customers and no defence budget exposure. Gradient remains the energetics half — fielded waterjet cut-and-washout, an expired core patent, and its own fabrication shop.

Then, by category: MT2 and Notra as *targets* — range-lead reclamation across 50 states, and the incumbent on the Canadian ammunition demil vehicle. ANT AG, U.S. Demil, ARCTECH, SAVIT, Sanders Lead, RES and MEC as *tuck-ins*. Wtórplast and ZEVETA as *carve-outs only*. AIA/REAS, Demil Tech, Clean Water Environmental, Geomines, Ramora, GCS and HDC marked *verify before approach* — each has one fact that decides everything, named on its profile. **Vertrex (Australia) sits outside the stated geography** and is included anyway because it is the cleanest operating platform found: artillery dismantling with remote fuze interrogation, a transportable flashing furnace, a

Dynasafe chamber already installed, and the only privately owned Commonwealth-licensed ammunition facility in the country.

The one direct competitor still worth arguing about — and the conflict in the file

EnviroSafe Demil is off the target list under this brief, because it is the most direct competitor in Tier 1 rather than a capability addition. The counter-argument deserves to be on the record: the US Army names exactly **five** commercial demil sites, and three are now locked inside Rheinmetall, General Dynamics and a PE platform. The independent slots are nearly gone, EnviroSafe runs both a fixed plant and mobile systems, and it holds a rocket-motor demil contract. Buying it would convert TWB into a US large-calibre operator overnight.

A factual conflict to resolve before that argument is had. One research pass found Banyan Growth Partners listing EnviroSafe as a current portfolio company; two independent passes found no PE sponsor and describe it as founder-held with USDA Business & Industry loan financing. **Those cannot both be true, and the answer changes both the price and the approach.** Establish ownership from the Nevada and Texas filings before any contact. Note separately that the \$110.1M demil IDIQ it sits on reached the end of its period of performance on 20 May 2026 and the ~\$30M/yr successor is being competed — time any approach to precede or follow that award, never to straddle it.

Who can actually do what.

Six capabilities, marked from each company's own published materials, permits and contract records — not from marketing adjectives. A half-mark means the capability is partial, claimed but unverified, or delivered in a form that breaks the custody model. Detail and sources are on each company's profile.

✓ **Documented** — published capability, permit or contract record • **Partial or unverified** — claimed, limited, or in a form that breaks custody ✗ **Not offered**

Nobody holds all six. Only four names combine mobile with metals recovery — TWB, EnviroSafe, Gradient and the Merkury line. And a ✓ in the chemical column is history, not revenue: the US programme completed July 2023.

Every company in this brief.

Ordered by tier, with acquisition fit marked. Tier 1 companies sell what TWB sells to the buyer TWB sells to;
Tier 6 are the acquirers, targets and comparables behind the ten-year plan.

1st	Ranked priority	Target	Credible target	Tuck-in	Second-order or capability tuck-in	Asset	Asset or brand purchase only, distressed
• Changes a decision — live threat, correction, or action							
REF	COMPANY	ACQ. FIT	BASE	WHAT THEY DO			
T1/01	EnviroSafe Demil LLC •		Hooks, TX, USA	Contained-thermal demil to .50 cal, mobile and fixed; metals recovery			
T1/02	LSC Destruction LLC •		Las Vegas, NV, USA	Mobile on-site narcotics, firearms and ammunition to .50 cal			
T1/03	Disarmament Solutions AB — Argo Defence Group AB (publ) •		Stockholm, Sweden	Four-container mobile destruction facility, operational in 1–2 days, rented			
T1/04	Sensitive Asset Solutions LLC — "Sergeant Shred"		Shenandoah Valley, VA, USA	Mobile underwater shredding of small arms ammunition; claims 38,000 rds/hr			
T1/05	SaferWorld International AB		Karlstad, Sweden	Container-built mobile demil to 155mm, plus weapon destruction at 60 rifles/hr			
T1/06	CADS — Canadian Ammunition Disposal Services Inc. •		Mississauga, ON, Canada	TWB's sister company. Mobile small-calibre ammunition and weapons — site says closed			
T2/01	Dynasafe — Dynasafe Demil Systems AB •		Karlskoga, Sweden	Static Detonation Chamber; the category benchmark. SDC 1000 deploys in three weeks			
T2/02	Rheinmetall Expal Munitions, S.A.U. — including EXPAL USA •		Madrid, Spain	Ammunition maker with fixed demil plant at Texarkana plus a mobile propellant plant			
T2/03	Nammo AS		Raufoss, Norway	Fixed-site demil: rotary furnace in Sweden, underground detonation in Norway			
T2/04	Diehl Defence — TAUBER, TD Services and EST Energetics		Überlingen, Germany	UXO clearance and munitions disposal, consolidated by three acquisitions since 2024			
T2/05	Spreewerk Lübben Delaborierung GmbH		Lübben, Germany	Fixed-site delaboration and incineration, 15,000 t/yr			
T2/06	GEKA mbH		Munster, Germany	German state destruction plant: chemical agent and conventional munitions			
T2/07	Esplodenti Sabino S.p.A.	Not available	Casalbordino, Italy	Fixed-site disassembly of grenades, naval mines, artillery and submunitions			
T2/08	MSM GROUP s.r.o. — ZVS holding, VOP Nováky		Dubnica nad Váhom, Slovakia	Fixed-site delaboration, 57–155mm, via the HYDRA machine. Owned by CSG			
T2/09	ESDS — Egmond Defense Supplies	Tuck-in	Netherlands	Fixed-site demil plus equipment sales; rotary kiln for small arms to 20mm			
T2/10	MuniRem Environmental, LLC	Tuck-in	Winder, GA, USA	Chemical neutralisation of explosives by reagent — no detonation, no thermal			

T2/11	Kobe Steel Ltd — DAVINCH		Kobe, Japan	Vacuum controlled-detonation chamber for chemical weapons and recovered CWM
T3/01	Day & Zimmermann — Hawthorne Army Depot •		Philadelphia, PA, USA	Operates Hawthorne Army Depot to 2046; demil is one of ~15 work statements
T3/02	General Dynamics Ordnance and Tactical Systems		St. Petersburg, FL, USA	Fixed-site demil and explosive waste disposal; holds an Army demil seat
T3/03	Arcwood Environmental — formerly Heritage / EBV Explosives •		Indianapolis, IN, USA	Joplin MO: rotary kiln, 11 thermal units; names LE small arms ammunition explicitly
T3/04	Gradient Technology •	5th	Elk River, MN, USA	Abrasive waterjet cut-and-washout at NSA Crane since 2001
T3/05	El Dorado Engineering, Inc. •	3rd	West Jordan, UT, USA	Transportable Flashing Furnace and contained burn systems, to 10,000 lb/hr
T3/06	General Atomics — GA-EMS		San Diego, CA, USA	Transportable cryofracture with robotic feed; sole-source
T3/07	Clean Harbors, Inc. •		Norwell, MA, USA	Colfax LA — the US commercial destination for confiscated ammunition. Open burn
T3/08	Explosive Service International, Inc. (ESI)	Target	Baton Rouge, LA, USA	Mobile contained-burn plant erected on site; executed Camp Minden
T3/09	Amentum Holdings, Inc.		Chantilly, VA, USA	Operates the Dynasafe Static Detonation Chamber at Anniston Army Depot
T3/10	American Ordnance LLC		Middletown, IA, USA	GOCO operator of Iowa and Milan AAPs; demil a listed line, OB/OD authority
T3/11	PIKA International, Inc.		Stafford, TX, USA	Munitions response and remediation; portable thermal unit treats residues, not ammunition
T4/01	Free — GunBusters, steel mills, county waste authorities, in-house EOD •		Chesterfield, MO, USA	Free firearms destruction funded by parts resale; plus mills and county burners
T4/02	Elastec, Inc. — Drug Terminator		Carmi, IL, USA	Portable drum-mounted narcotics incinerator on GSA schedule
T4/03	Firelake Manufacturing		Hutchinson, MN, USA	26-ft trailer-mounted evidence and narcotics incinerator; no ammunition capability
T4/04	Inciner8 Limited		Burscough, England, UK	Containerised and trailer-mounted narcotics and contraband incinerators, 190 countries
T5/01	UN Mine Action Service (UNMAS) •		New York, USA	A buyer. Three procurements in eight months for mobile small-arms destruction
T5/02	Mines Advisory Group (MAG) •		Manchester, England, UK	Charity. Destroyed 10.2 million rounds of small arms ammunition in 2024, in place
T5/03	The HALO Trust		Thornhill, Scotland, UK	Charity. Destroys landmines, UXO and ammunition in place under IMAS 11.20
T5/04	Black Tusk Geophysics Inc. •		Vancouver, BC, Canada	Advanced geophysical classification; DAGCAP accredited. Detects, destroys nothing
T5/05	Tetra Tech, Inc.		Pasadena, CA, USA	USACE munitions response; destruction by blow-in-place. No demil plant

T5/06	Janus Global Operations — Acuity International		Knoxville, TN, USA	EOD, demining and munitions response; MAMMS III seat
T5/07	SafeLane Global · Igne · Gap EOD · Fenix Insight · The Development Initiative · USA Environmental	Target	UK, Australia, USA	Clearance, detection, sensors and munitions analysis — none destroys stockpiles
T6/01	Cadre Holdings, Inc. •		Jacksonville, FL, USA	Serial acquirer of EOD, protection and nuclear-handling businesses. Never buys at 1.2x
T6/02	ICOR Technology Inc. •		Ottawa, ON, Canada	EOD robots. Bought by Cadre at 2.31x revenue — the closest Canadian precedent
T6/03	Czechoslovak Group (CSG) •		Prague, Czech Republic	€6.7bn ammunition group with demil via MSM; opened North America Jan 2025
T6/04	Veolia · Enviri · Clean Earth		Boston, MA / Paris	Hazardous waste. Clean Earth sold to Veolia for \$3.04bn — the sector's price anchor
T6/05	Perma-Fix · Onterris (formerly Montrose) · American Battery Technology •		Atlanta / Little Rock / Reno, USA	Three listed valuation anchors — and three warnings about the comp set
T6/06	The PE platforms — EQT · Banyan · Solix · Gage AB · Venterra •		Stockholm · Utah · Copenhagen	The capital behind EnviroSafe, Arcwood, Dynasafe and Igne
T6/07	The acquirable set — El Dorado · Gradient · Black Tusk · ESI · USA Environmental · GunBusters •		US and Canada	Six independent, founder-held targets, ranked. El Dorado first
T7/01	JAKUSZ Sp. z o.o. •	1st	Kościerzyna, Poland	Builds complete ammunition disposal factories, containerised or fixed, 5.45–203mm
T7/02	Wtórplast — the Merkury demil line	Carve-out	Bielsko-Biała, Poland	Containerised deploy-to-depot artillery disassembly, 30–155mm, ~500 rds/shift
T7/03	ZEVETA AMMUNITION a.s.	Carve-out	Bojkovice, Czech Rep.	Grenade and pyrotechnics maker with a delaboration line; 45% net margin
T7/04	Artillerie Inrichtingen Armaments B.V. — REAS OTS	Verify first	Tilburg, Netherlands	Claims bombs, warheads, MLRS motors, fuzes — unverified, registered 2022
T7/05	DEMIL TECH d.o.o.	Verify first	Gospić, Croatia	Industrial demil plus white phosphorus recycling — rare capability, thin record
T7/06	Josef Meissner GmbH & Co. KG •	2nd	Cologne, Germany	Waterjet washout to 203mm plus TNT, HMX and RDX recovery plant
T7/07	ANT Applied New Technologies AG	Tuck-in	Lübeck, Germany	MACE mobile abrasive waterjet — cuts bombs to 500mm body diameter
T7/08	U.S. Demil, LLC · ARCTECH, Inc. · SAVIT Corporation	Tuck-in	NY · VA · NJ, USA	Three US technology and engineering options: rotary furnace, alkaline hydrolysis, build
T7/09	Interco Trading, Inc. •	4th	St. Louis, MO, USA	Buys demilled ordnance, artillery shells, range lead and spent brass
T7/10	MT2, LLC — Metals Treatment Technologies	Target	Arvada, CO, USA	Range lead reclamation across 50 states; exclusive ECOBOND licence
T7/11	Lacero Solutions Inc. •	5th	Mississauga, ON, Canada	Certified pyrotechnic destruction with chain of custody — 45 min from Hamilton
T7/12	Clean Water Environmental, LLC	Verify first	Dayton, OH, USA	RCRA Part B with a Class 3 reactive-waste modification — the permit is the asset

T7/13	Sanders Lead · Range Environmental Solutions · MEC Corporation	Tuck-in	AL · TX · MD, USA	Independent lead smelter plus two route-and-permit reclamation tuck-ins
T7/14	Alford Technologies Limited •	3rd	Trowbridge, UK	Makes the charges that render safe and destroy bombs and projectiles in place
T7/15	Geomines	Verify first	Var region, France	Sells in-country ammunition stockpile destruction to sovereign states
T7/16	Ramora UK · Global Clearance Solutions AG · HDC International	Verify first	UK · Switzerland · Ukraine	Commercial EOD, clearance systems, and NSPA and national accreditations
T7/17	Notra Inc.	Target	Ottawa, ON, Canada	DND's primary UXO contractor; bid the PSPC ammunition demil vehicle
T7/18	Vertrex — formerly Pentarch Industrial	Target	Oaklands, NSW, Australia	Artillery dismantling, transportable flashing furnace, SDC — the only licensed private AU plant

Direct collision

Mobile, on-site destruction of small arms ammunition to .50 calibre, sold to the same buyer. These are the only companies whose pitch and TWB's pitch are the same sentence.

EnviroSafe Demil LLC

T1 / 01

Private, PE-backed — Banyan Growth Partners (Holladay, UT). Nevada LLC. ~\$3.8M raised across two rounds.

YEARS IN BUSINESS	Founded January 2018 — 8 years
HEADQUARTERS	Hooks, Texas, USA — 401 N. Montague St., TexAmericas Center East Campus, on the former Lone Star Army Ammunition Plant, adjacent to Red River Army Depot. Originally Fallon, Nevada; relocated 2022–23.
OPERATING MARKETS	United States only. US Army / JMC demil enterprise as prime and task-order holder; explicit outreach to local, state and federal agencies for small arms ammunition; commercial.
REVENUE	Not disclosed. Banyan's stated screen is \$5M+ revenue and \$1M+ EBITDA at entry; ESD holds a \$12.39M five-year Army task order, and brought \$363M in stated total contract values through the Nevada → Texas move. Indicative band \$5–15M/yr [est.] — derived from the Banyan screen and the task-order value, not a company figure.
SERVICES	Demilitarization, decontamination and materials recovery. Explosives, energetics, propellants, rocket motors, conventional ammunition and small arms ammunition to .50 calibre , with metals recycling. Contained thermal — energetics volatilised and separated from metals through pollution abatement; markets itself as "America's clean alternative to open burning". Both mobile and fixed-site : states it can bring mobile systems to client locations or arrange shipping. Has built the \$20–25M fixed-site backbone at TexAmericas that TWB's Years 1–3 roadmap describes building. No narcotics or seized-property line.
CONTRACTED WITH	CAGE 83KD5, SAM active to 29 July 2027. Primary NAICS 332992 — Small Arms Ammunition , TWB's exact category, plus 332993, 562112, 562211. Self-certified Small Disadvantaged Business . One of three awardees on the US Army's \$110.1M multiple-award FFP IDIQ for demilitarization and disposal of conventional ammunition (ACC–Rock Island, 21 May 2021, eight proposals, through 20 May 2026) alongside Expal USA and GD-OTS. Task order W52P1J-21-F-0250, \$12,390,267. Also DOI 15A00021CAQA00016 and W519TC24F0233. Named by Army PM Demil (NDIA, Oct 2025) as one of five commercial demil performers.
SITE	envirosafedemil.com

WHAT IT MEANS FOR TWB

The same company with a US passport. Every structural advantage a Canadian entity legally cannot hold — CAGE, SAM, SDB status, a seat on the Army vehicle — plus an explicit mobile-to-client-site offer at .50 cal. What survives contact: TWB has operated since 2001 against their 2018, and has an international installed base against their domestic-only footprint. **Their actual mobile deployment lead time is undisclosed and is the single most important open question in the competitive set** — it decides whether "same day, on site" survives.

LSC Destruction LLC

Private, founder-owned. Nevada LLC. No PE backer or parent identified. Beneficial owner not disclosed.

YEARS IN BUSINESS	Contested. Company site claims 2009; SAM and ZoomInfo record entity founding 12 January 2017 — 9 years. Federal (SAM) registration only 2 September 2025.
HEADQUARTERS	Las Vegas, Nevada, USA — 1810 E Sahara Ave, Ste 75105 (mail-drop style suite).
OPERATING MARKETS	Continental US, 48 states, "mobile unit locations nationwide". State and local law enforcement — police, sheriffs, tribal police — plus federal: names ATF, US Air Force and Department of Veterans Affairs on its site. No international.
REVENUE	Not disclosed. ZoomInfo band: under \$5M, 1–10 employees. Indicative \$1–5M [est.]. SAM self-report of >1,500 employees is not credible against every other signal and is almost certainly a form error.
SERVICES	On-site contraband destruction. Narcotics (DEA Schedules I–V, to 4,000 lbs/day), firearms and weapons (seizures, buybacks, decommissioned duty weapons, machine guns), ammunition to .50 calibre , vapes, drug-lab chemicals, medical and biological waste, hard drives and electronics. Mobile incineration for drugs; mobile shredding and pulverising for weapons, meeting California SB 1019. Mobile, at the client's location. Explicitly markets removal of DOT hazmat classification and preservation of chain of custody; issues certificates of destruction for ATF/DEA compliance.
CONTRACTED WITH	CAGE 15CT4, SAM active to 16 July 2027, primary NAICS 562211. Zero recorded federal prime contracts and zero subcontracts. No set-aside certification. Named customers appear only as unsourced site claims. Memberships: IAPE, CAPE, MAPE, ILEETA, MOPCA, CPCA. Displays a CMMC logo with no stated level.
SITE	lscdestruction.com

WHAT IT MEANS FOR TWB

The sharpest new finding, and nowhere in the deck. Identical buyer, identical custody argument, identical .50 ceiling, identical ammunition-plus-narcotics scope, already nationwide, already issuing certificates of destruction. **The narcotics and seized-property expansion does not open white space — it walks into an occupied position.** What they do not have: metals recovery economics, any federal contract record, or a machine with a 25-year service history.

Disarmament Solutions AB — Argo Defence Group AB (publ)

T1 / 03

Subsidiary of Argo Defence Group AB (publ), listed on NGM Nordic SME, Sweden. Sister companies: Disarmament Solutions Ukraine, Swedish Net Air & Defence, Poseidon Diving Group.

YEARS IN BUSINESS	Group formed 2025 — 1 year; claims roots in defence and security to 1958.
HEADQUARTERS	Stockholm, Sweden — Munkbrogatan 2, 111 27.
OPERATING MARKETS	Sweden, Ukraine (active operational presence), international donor-funded disarmament and stockpile reduction. NATO and allied militaries. Operates to IATG and MOSAIC. Not a law-enforcement vendor.
REVENUE	Not disclosed — newly listed, no published figure.
SERVICES	A mobile facility built from four 20-ft ISO containers : ammunition destruction, weapon destruction, reception inspection and preparation, and operations/maintenance. Fully self-contained — container lifting system needing only standard flatbed trucks and no crane, electric telescopic forklift, diesel generator with backup, emission control, fire protection, record keeping, security. Established and operational in 1–2 days , run continuously by a crew of three. Capacity: 4,000 rounds of 7.62 per hour, or 10 kg TNT NEQ of HE per hour; 60 small arms per hour. Offered on a rental/service model so the customer avoids capital outlay.
CONTRACTED WITH	No named contracts or customers published. Ukraine demining equipment donation programme; Swedish authorities. Thin.
SITE	disarmamentsolutions.com

WHAT IT MEANS FOR TWB

The only vendor found whose pitch matches TWB's on all four claim axes at once — mobile, closed, item-level custody tracking against diversion, and a stated 1–2 day set-up. **Their "operational in 1–2 days" is the nearest thing in the market to a challenge to "same day, on site, your own people."** European, no US posture, so the collision is allied/NATO rather than US law enforcement — but it is the collision that matters most in the Nordic-Baltic territory TWB already has an agent in.

Sensitive Asset Solutions LLC — "Sergeant Shred"

T1 / 04

Private, founder-owned. Run by William Metcalf, retired ATF Senior Special Agent and retired USAF Captain. Fabrication partner: Rosemeck Metal Solutions. Reagent licensed in from MuniRem.

YEARS IN BUSINESS	Not disclosed. Earliest public traces Sept–Oct 2024; an SBDC advisory-council appearance April 2024. Roughly 2023–24 vintage [est.].
HEADQUARTERS	Shenandoah Valley, Virginia, USA. Exact address not published.
OPERATING MARKETS	Positions for worldwide deployment — military stockpile reduction, disaster response, and US law-enforcement evidence vaults.
REVENUE	Not disclosed. Appears pre-revenue or early revenue. No defensible basis for an estimate.
SERVICES	Small arms ammunition only. Mechanical shredding inside an enclosed underwater bath , with propellant and primer destroyed on contact by a chemical reagent; by-products are recyclable scrap metal and non-hazardous wastewater. Claims zero emissions and ~38,000 rounds (1,000 lb) per hour . Mobile — "transported anywhere in the world".
CONTRACTED WITH	No SAM/CAGE record, no federal awards, no named customers. A marketing site and an SBDC appearance, not a contract record.
SITE	sensitiveassetsolutions.com

WHAT IT MEANS FOR TWB

They market a direct comparison: **"9x faster than the leading mobile small-arm ammunition system."** That is precisely the throughput scoreboard the brand strategy says never to accept, and it exists in the market now, unattributed, ready to be repeated back to TWB in a room. Exploitable weaknesses: a wet waste stream, no closed-chamber thermal proof, no contract history, and differentiating chemistry that is licensed, not owned.

SaferWorld International AB

T1 / 05

Private Swedish company. Ownership not disclosed.

YEARS IN BUSINESS	Claims more than 30 years in the field; no incorporation date published.
HEADQUARTERS	Karlstad, Sweden — head office and showroom.
OPERATING MARKETS	Global. Military and weapons storage facilities, aviation, maritime, public transit, public venues.
REVENUE	Not disclosed.
SERVICES	Mobile Demil System — transportable units built into standard sea containers for destruction of weapons and ammunition at the storage site. Three units: an Ammunition Dismantling Unit (MESC-10) for heavy calibre to 155mm , built for a flatbed trailer at ~25 tons; an Ammunition Destruction Unit for small arms ammunition and explosives; and a Weapon Destruction System at ~60 rifles/hour. Also Mobile Explosion Suppression Chambers and hardened litter bins.
CONTRACTED WITH	No named customers or contracts published. Thin.
SITE	saferworldintl.com

WHAT IT MEANS FOR TWB

Container-mobile and explicitly at-the-storage-site, which puts it inside the custody wedge, but with no published deployment time, no contract record and a product line spread across airport security furniture. A second Swedish entrant in the same lane as Disarmament Solutions — the Nordic market is where the wedge gets contested first.

CADS — Canadian Ammunition Disposal Services Inc.

Private, founder-owned Canadian corporation. TWB Designs' own sister / in-market operating entity, using the TWB-built machine.

YEARS IN BUSINESS	Founding year not published. TWB Designs' legacy site carries a 2002–2026 copyright.
HEADQUARTERS	Mississauga, Ontario, Canada — 804 Southdown Rd.
OPERATING MARKETS	Canada only. Police services and agencies, bilingual EN/FR. No US or NATO footprint.
REVENUE	Not disclosed. ZoomInfo models ~\$5M, 11–50 employees — a third-party estimate, not a filing, and it should not be repeated as fact. Combined TWB+CADS 2025 actuals are \$862,856 CAD revenue / ~\$235K EBITDA, declining.
SERVICES	Destruction of small-calibre ammunition, weapons and pepper spray using patented technology, certified by Ontario's Ministry of the Environment. Mobile, on-site.
CONTRACTED WITH	Customer-list page now returns 404 and could not be re-verified. No Canadian or US federal contract vehicle identified.
SITE	cadsammunitiondisposal.com

WHAT IT MEANS FOR TWB

Three live liabilities, not one. **(1)** The CADS homepage, last published 22 July 2026, reads in full: "CADS is permanently closed due to Family Health Issues" — any diligence reader who checks the domain sees that first. **(2)** The site sold "at your site or at ours" with per-km travel pricing, which is the opposite of the custody wedge, and quotes 100 lb/hr at 482°C/982°C against the deck's 60 lb/hr at 850°F/1750°F. **(3)** A sister company selling the identical product is either a channel or an uncontrolled competitor; PE readers treat this as a gating pre-LOI carve-out item.

Chamber and plant vendors

They destroy the same material but the customer ships it to them, or the unit takes weeks to stand up. The custody wedge holds against every company on this page — narrowly, and only while the deployment-time gap is real.

Dynasafe — Dynasafe Demil Systems AB

T2 / 01

Private. Owned by **Gage AB**, the holding company of CEO Charles Diggs — 49% bought from Solix Group in 2021, whole group 2023. Org.nr 559035-6050. Note: Dynasafe BACTEC is no longer Dynasafe; it became SafeLane Global and now trades as Igne, under Solix.

YEARS IN BUSINESS	Brand founded 1991 — 35 years. Operating entity registered 17 Nov 2015.
HEADQUARTERS	Karlskoga, Örebro County, Sweden. Offices in Sweden, Germany, USA (Alabama), Japan.
OPERATING MARKETS	Global. Defence ministries, army depots, chemical-weapons destruction programmes, police and public safety, transport security. Claims 400+ explosive containment chambers and 40 chemical and conventional demil plants delivered.
REVENUE	SEK 548.4M (FY2024) ≈ USD 51.9M for Dynasafe Demil Systems AB per Swedish registry filing (ECB 2024 averages, SEK/USD 10.5622). 18 employees at that entity; group is larger and group revenue is not disclosed.
SERVICES	Static Detonation Chamber (SDC), pyrolysis chamber, rotary kiln, mechanical disassembly, off-gas treatment, mobile SDC, DEMIL-100. Destroys conventional ammunition small to large calibre, mines, hand grenades, propellant, rocket motors, chemical agent — and, per the D-100 page, narcotics, chemicals and fireworks . SDC 1000 datasheet, verbatim: "~10-12 feeds per hour, 1000 kg ammunition per shift"; NEQ 1.5 kg TNTe; and, under Mobility Option, "Deploys in three weeks." It is the only model with a mobility option — SDC 1200 CEM, 1500 and 2000 are marked Stationary. Separately, the Mobile SDC 200/500 relocates between sites "within five days" on a ~40×40 m footprint, with no throughput published.
CONTRACTED WITH	US Army — Blue Grass and Pueblo Chemical Agent-Destruction Pilot Plants; SDC installed at Anniston Army Depot (operated by Amentum). DDESB approval granted 23 May 2017. SDC plant sold to China, announced 30 Sep 2013.
SITE	dynasafe.com

WHAT IT MEANS FOR TWB

The benchmark, and the source of TWB's own best claim. **The three-week figure is now sourceable from two Dynasafe-controlled documents** — cite the datasheet and the SDC product page directly and convert an assertion into a documented gap. Two corrections to carry: the same sheet states 1,000 kg per shift, which is exactly why the never-be-scored-on-throughput rule is right; and Dynasafe markets the DEMIL 100 for narcotics, so **narcotics is not a European differentiator**. If a competitor counters "three weeks" with "five days", that number describes moving an already-commissioned plant, not standing one up cold.

Rheinmetall Expal Munitions, S.A.U. — including EXPAL USA

T2 / 02

Wholly owned by **Rheinmetall AG** (Frankfurt: RHM), which acquired 100% of Expal Systems S.A.U. from MAXAM on 1 August 2023 at ~€1.2bn enterprise value.

YEARS IN BUSINESS	Founded 1872 as Sociedad Española de la Dinamita, by Alfred Nobel — 154 years. US demil operations at Texarkana from 2016.
HEADQUARTERS	Madrid, Spain. Seven sites: Trubia, Burgos, Navalморal, El Gordo, Albacete, Murcia, and Texarkana/Hooks, Texas.
OPERATING MARKETS	Spain, USA, NATO and allied nations. Historic permanent presence in Denmark, Italy, Bulgaria; project work in Belarus, Brazil, Cyprus, Taiwan, Slovenia.
REVENUE	€716.7M (FY2025) ≈ USD 809.9M , up 12% on €639.5M; net profit €245M; EBIT €317.1M; backlog €1.725bn; ~1,949 employees. Filed with the Spanish Registro Mercantil. Demil is not separately disclosed.
SERVICES	Principally an ammunition manufacturer — artillery 105/155mm, mortars, medium calibre, fuzes, rocket propulsion. Demil is a secondary line: industrial demilitarization at the Texarkana fixed plant (gas treatment centre, remote-control operations), plus a mobile plant for unstable propellants (2,000+ tons processed), plus underwater detection, extraction and demilitarization of sea-dumped munitions (8,000+ items). Pre-acquisition EXPAL material describes a mobile rotary kiln with optional off-gas treatment, cryofracture, a detonation chamber and autoclaves, a global aggregate capacity of 1,500 t/month, and a handled range of "SAA up to missiles" .
CONTRACTED WITH	US Army agreement since 2016; passed 3,000 tons of ammunition demilitarized for the US Army . One of three awardees on the \$110.1M ACC–Rock Island demil MAC. Slovenia MoD (900 t, MORS 147/2010); EU-funded Belarus AP-mine destruction (3.4m mines); Cyprus MoD; Taiwan 4,000 t order; Spanish MoD.
SITE	rheinmetall.com

WHAT IT MEANS FOR TWB

The closest European analogue, and **it publishes no deployment time and no throughput for its demil lines anywhere in current Rheinmetall material** — which makes establishing that number the highest-value single call in the competitive set. The only quotable figures are EXPAL-era 2011 and describe country-scale plants: Belarus took "6 months to set up the facility, 22 months for destruction." Attribute precisely if used.

Nammo AS

50% Norwegian Ministry of Trade, Industry and Fisheries / 50% Patria Oyj (Finland).

YEARS IN BUSINESS	Founded 1998 — 28 years
HEADQUARTERS	Raufoss, Norway — Enggata 40, NO-2830. 27 production sites in 12 countries.
OPERATING MARKETS	Europe and the USA. Defence ministries, NATO nations, commercial ammunition.
REVENUE	NOK 14.41bn (FY2025) ≈ USD 1.39bn ; EBIT NOK 1,830M; order stock NOK 54,979M; 4,200 employees. Group-wide — demil not separately disclosed.
SERVICES	Demil is a named service line at two sites, and it is fixed-site only — no mobile or on-site capability appears anywhere in Nammo's demil brochure . Vingåker, Sweden: high-speed disassembly and sorting, incineration in rotary furnace and/or static kiln, off-gas through cyclones, filters and afterburners, storage to 4,000 t NEQ. Løkken Verk, Norway: controlled underground detonation in a disused copper mine 900 m below surface, up to 2.5 tons NEQ per day , storage to 565 t NEQ. Scope stated as "from small caliber conventional munitions, right through to aircraft bombs and missile systems."
CONTRACTED WITH	No named demil customers published. Norwegian and Finnish state owners; NATO-nation defence ministries.
SITE	nammo.com

WHAT IT MEANS FOR TWB

A \$1.4bn state-backed prime that will always win a tons-per-year comparison and can never answer the custody question — the customer ships the ammunition to Sweden or drops it down a Norwegian mine. Useful precisely as the contrast case in Nordic conversations, where TWB's agent already sits.

Diehl Defence — TAUBER, TD Services and EST Energetics

T2 / 04

Diehl Defence GmbH & Co. KG, part of privately held Diehl Stiftung & Co. KG. Acquired 100% of TAUBER (announced 29 Oct 2025); holds 50% of TD Services JV with Tauber (cleared July 2024); acquired EST Energetics from General Atomics Europe (transfer 1 July 2026).	
YEARS IN BUSINESS	Diehl group founded 1902 — 124 years. Tauber roots to 1964.
HEADQUARTERS	Überlingen, Germany (Diehl Defence); Diehl Stiftung in Nuremberg. Tauber in Greven; EST Energetics in Rothenburg, Saxony.
OPERATING MARKETS	Germany and NATO. Bundeswehr is the anchor customer; German federal and Land authorities for Kampfmittelräumung.
REVENUE	Diehl group not broken out for this line. TAUBER ~€100M annual revenue, ~700 employees ≈ USD 113M (stated by Diehl at the Oct 2025 announcement). EST Energetics: 60+ employees, revenue not disclosed.
SERVICES	UXO clearance, geophysical detection, recovery, disarming and disposal of munitions, specialist deep excavation, ammunition logistics and inventory management, plus (via EST) lithium-metal battery recycling, airbag disposal, fireworks recycling and demilitarization of military equipment. Tauber owns Spreewerk Lübben. Everything in the stack is fixed-site. No mobile or on-site destruction product.
CONTRACTED WITH	Bundeswehr (via Tauber and Spreewerk); German federal and Land authorities.
SITE	diehl.com

WHAT IT MEANS FOR TWB

The most important structural change in the European segment, and it happened in the last ten months. Germany's fragmented disposal capacity is now one buyer with ~€100M of Tauber revenue behind it, built by three acquisitions in twenty-two months. Any German positioning that treats Spreewerk, Tauber and Diehl as separate parties is out of date — and two assets that fit TWB's own target profile precisely were taken off the market in the process.

Spreewerk Lübben Delaborierung GmbH

T2 / 05

TAUBER Unternehmensgruppe since 1 July 2024, and therefore ultimately Diehl Defence . Previously General Atomics Europe from 1992. Amtsgericht Cottbus HRB 18009.	
YEARS IN BUSINESS	Site founded 1957 by DDR government order — 69 years; current legal entity constituted 2024.
HEADQUARTERS	Börnichen district, Lübben (Spreewald), Brandenburg, Germany.
OPERATING MARKETS	Germany primarily; historically international clients.
REVENUE	Not disclosed.
SERVICES	Fixed-site ammunition delaboration and incineration. Historically NVA ammunition, then Bundeswehr cluster munitions; also airbags and lithium batteries. Capacity reported at 15,000 tonnes annually post-1995. The site was originally a small arms ammunition producer from 1961. Employees fell from 800+ in the 1960s to 28 by 2024.
CONTRACTED WITH	Bundeswehr (cluster munitions); formerly the Nationale Volksarmee.
SITE	tauber-systeme.de

WHAT IT MEANS FOR TWB

Fatal explosions in 2002 (four dead) and 2018 (one dead). Alongside Esplodenti Sabino, this is the European safety-record contrast — but use it carefully: TWB's own chamber has no published net-explosive-weight rating, and a safety argument invites the question back.

GEKA mbH

T2 / 06

100% Bundesrepublik Deutschland — the German federal government, under BMVg. Amtsgericht Lüneburg HRB 101213.

YEARS IN BUSINESS	Founded 1997 — 29 years; current GmbH registration 2005.
HEADQUARTERS	Munster, Germany — Humboldtstr. 110, a 67-hectare site adjacent to Truppenübungsplatz Munster-Nord.
OPERATING MARKETS	Germany — the federal government is sole shareholder and primary customer — plus German Länder and private industry on spare capacity, and international work for the OPCW.
REVENUE	Not disclosed. Files annual reports 2006–2022 but figures sit behind paid registry access.
SERVICES	Fixed-site. Three incineration plants, one soil-washing facility, delaboration installations for conventional and chemical munitions. Destroys chemical warfare agents and munitions, conventional munitions to 2 tonnes TNT-equivalent, contaminated soil, and industrial residues from CW neutralisation. No mobile capability, no published deployment time or throughput.
CONTRACTED WITH	German federal government; German states; OPCW — received and destroyed Syrian chemical-weapons residues from September 2014, 340 t of hydrolysate plus 30 t of other contaminated waste.
SITE	geka-munster.de

WHAT IT MEANS FOR TWB

A state-owned national destruction utility. Not a competitor for a mobile unit; relevant as the model European ministries default to when asked "where does this go?" — and as evidence that the answer in Germany is a government plant, not a vendor.

Esplodenti Sabino S.p.A.

NO LONGER AVAILABLE

T2 / 07

Private, Salvatore family. P.IVA 00119530699. Share capital €1,370,000.

YEARS IN BUSINESS	Founded 1972 — 54 years; munitions handling since 1978; current S.p.A. registration 2010.
HEADQUARTERS	Casalbordino (CH), Abruzzo, Italy — Contrada Termini. Second storage site at San Giovanni Rotondo.
OPERATING MARKETS	Italy and NATO Europe.
REVENUE	€14.66M (FY2022); €13.53M (FY2023) ≈ USD 14.6M with a €3.76M loss. A registry aggregator reports €469,888 (FY2025) with a €5.54M loss — consistent with licence suspension, but re-verify against the filed bilancio before use . Employee band 50–99.
SERVICES	Fixed-site demilitarization by disassembly and destruction. Grenades, naval mines, artillery and rocket-launcher warheads, cluster munitions and submunitions. Claims processing of 10,000+ munition types, 700,000 grenades, 100m+ submunitions. Storage 400 t at Casalbordino, 286 t at San Giovanni Rotondo. No mobile capability, no throughput published.
CONTRACTED WITH	NATO-aligned defence ministries — Austria, Belgium, Denmark, France, Germany, Greece, UK, Norway, Netherlands, Spain, USA — and Italy's Agenzia Industrie Difesa.
SITE	ufficiocamerale.it

WHAT IT MEANS FOR TWB

Six worker deaths since 2020, a prefectural licence suspension, and a further fatal explosion reported July 2026, with revenue collapsing from €13.5M to under €0.5M. **The clearest available demonstration that this industry's risk is concentrated where the material is accumulated** — which is the argument for destroying it where it already sits, in small quantities, rather than trucking it to a plant.

MSM GROUP s.r.o. — ZVS holding, VOP Nováky

T2 / 08

Part of **Czechoslovak Group (CSG)**, now listed on Euronext Amsterdam. Subsidiaries: ZVS holding a.s., VOP Nováky a.s., Vývoj Martin a.s., FM Granada S.L. MSM Group North America launched Jan 2025, HQ St. Petersburg, FL.

YEARS IN BUSINESS	MSM Group founded 2012 — 14 years; constituent plants far older.
HEADQUARTERS	Dubnica nad Váhom, Slovakia — Štúrova 925/27.
OPERATING MARKETS	Slovakia, Czech Republic, Spain, and since 2025 North America. NATO nations.
REVENUE	Not disclosed at MSM Group level. Parent CSG: €6.7bn (FY2025) , +71.7%; adjusted operating EBIT €1.6bn; backlog €15bn.
SERVICES	Full ammunition lifecycle "from development and production through modernization and life extension to environmental disposal." Demil is fixed-site at VOP Nováky . Flagship machine is HYDRA / HYDRA 100 — automated delaboration of calibres 57 to 155mm , two technicians, unscrewing initiators and separating projectile from case in a single cycle; developed and built in one year. No throughput or deployment time published. Note the 57–155mm envelope: small arms is outside it .
CONTRACTED WITH	Not named publicly. Slovak MoD and NATO nations by implication.
SITE	msm.sk

WHAT IT MEANS FOR TWB

Not a competitor for small arms — but the parent is. CSG is executing exactly the buy-and-build the deck proposes, at €6.7bn of revenue and vertically integrated from manufacture through demil, and it opened a North American arm in January 2025. **Any US or Canadian demil asset TWB bids on may face a far better-capitalised bidder.**

ESDS — Egmond Defense Supplies

TUCK-IN

T2 / 09

Private; part of a group that also operates the AmmoGuards munition-health-management platform. Ownership not disclosed.

YEARS IN BUSINESS	Claims over 45 years of demilitarization expertise; exact founding year not published.
HEADQUARTERS	Netherlands.
OPERATING MARKETS	European defence ministries and OEMs. ISO 9001:2015, ISO 14001:2015, OHSAS 18001:2007.
REVENUE	Not disclosed.
SERVICES	Demilitarization of munitions, explosives and pyrotechnics, both as a service provider and as an equipment supplier . Technologies: Direct Rotary Kiln APE 1236 for small arms cartridges up to 20mm , detonators and fuzes; static thermal ovens; cryogenic cooling and crushing; disassembly by cutting and water-jet washout; explosive reformulation; chemical test lab. Delivers a Certificate of Destruction . Also sells turnkey facility design, commissioning, permitting and training. Fixed-site — the material comes to the plant.
CONTRACTED WITH	No named contracts published. Thin.
SITE	es-ds.com

WHAT IT MEANS FOR TWB

The most direct European small-arms line comparator outside Dynasafe, and the one that sells the same paperwork TWB sells — a certificate of destruction. Fixed-site, so the wedge holds, but they are a credible teaming partner for a European entry and worth knowing before a competitor does.

MuniRem Environmental, LLC

TUCK-IN

T2 / 10

Private, founder-led — Dr Valentine Nzengung, University of Georgia. Backers listed as MECO of Atlanta and UGA; \$2.32M raised across three rounds, latest round debt. Not PE-controlled.

YEARS IN BUSINESS	Founded 2014 — 12 years
HEADQUARTERS	Winder, Georgia, USA — 738 Tucker Road, Ste A.
OPERATING MARKETS	US federal (DoD), defence primes, commercial explosives industry, international military organisations. Not a law-enforcement vendor.
REVENUE	Not disclosed. Three employees per PitchBook, implying well under \$5M [est.] — headcount only, a weak basis.
SERVICES	Chemical neutralisation, not thermal. Patented MuniRem® reagent destroys explosives and energetics — "No Detonation, No Hazardous Waste"; claims 100+ tons of explosives neutralised without a detonation, with FBI-verified independent testing. Demilitarization, energetics disposal, facility and equipment decontamination, D&D, soil and groundwater remediation, emergency response. Reagent-based and field-deployable — sold as chemistry and service. Ordnance, propellant and explosive residues are the lead, not small arms.
CONTRACTED WITH	Names US DoD, General Dynamics and Northrop Grumman as partners on its own site — treat as a company claim, not a verified award. No CAGE/UEI or federal prime record verified; DoD work appears to run through primes.
SITE	munirem.com

WHAT IT MEANS FOR TWB

Matters for two reasons. It is one of the three parties claiming "clean alternative to open burning" — with MuniRem leading in all caps — which is why that phrase is unusable. And its reagent is the chemistry inside Sensitive Asset Solutions' Sergeant Shred, so the two names in this brief are one supply chain.

Kobe Steel Ltd — DAVINCH

T2 / 11

Public, Tokyo Stock Exchange (Kobelco).

YEARS IN BUSINESS	Kobe Steel founded 1905 — 121 years
HEADQUARTERS	Kobe, Japan.
OPERATING MARKETS	Japan, plus international chemical-weapons destruction programmes — Belgium, UK trials, US Edgewood/APG testing.
REVENUE	Group figures published; the DAVINCH line is not separately disclosed.
SERVICES	DAVINCH — a vacuum/controlled-detonation chamber for destruction of old and abandoned chemical weapons and recovered chemical warfare materiel. Transportable in a DAVINCH LH configuration, but fundamentally a project-deployed fixed installation rather than a trailer system. Aimed at chemical agent and recovered CWM, not routine small arms stockpiles.
CONTRACTED WITH	Japanese government abandoned-chemical-weapons programme; US Army testing at Edgewood, Aberdeen Proving Ground.
SITE	kobelco.co.jp

WHAT IT MEANS FOR TWB

Included for technology completeness only. Chemical weapons is a closed government programme in terminal wind-down — the only priceable commercial CW-destruction order found anywhere was PyroGenesis' PACWADS at \$360,000. Drop chemical weapons from the roadmap; keep DAVINCH in the file so the omission is visibly deliberate.

The US demil industrial base

Fixed-site primes, depot operating contractors and energetics incumbents. They set the price of destruction per ton and they hold the Army work. TWB does not win on their axis and should never be scored on it.

Day & Zimmermann — Hawthorne Army Depot

T3 / 01

Private, family-owned (Yoh family; Chairman & CEO Harold L. Yoh III). No public ticker.

YEARS IN BUSINESS	Founded 1901 — 125 years; ~40 years operating at Hawthorne.
HEADQUARTERS	Philadelphia, Pennsylvania, USA — 1835 Market Street. 900+ work locations.
OPERATING MARKETS	US and global. US Army (JMC / ACC-RI), DoD, commercial nuclear and process industries. Present at 57% of the US nuclear fleet.
REVENUE	\$2.9bn company-stated, ~32,000 employees. Munitions and Government Services is one line within that; segment revenue not disclosed.
SERVICES	Depot operations, storage, ordnance disposal and demilitarization of specified families of ammunition at Hawthorne Army Depot, Nevada — the Army's largest ammunition depot. Also munitions manufacturing and LAP through American Ordnance. Fixed-site, government-owned/contractor-operated. Hawthorne processes historically include open burn / open detonation and disassembly. D&Z is an operator, not a technology vendor.
CONTRACTED WITH	W519TC-26-D-A018 — \$2,301,227,487 firm-fixed-price, completion 29 December 2046 , ACC–Rock Island. Scope is operation, maintenance and modernization "including demilitarization of specified families of ammunition and supply depot operations" — demil plus fourteen additional work statements .
SITE	dayzim.com

WHAT IT MEANS FOR TWB

This is a 20-year base-operations award, not a demil award, and describing it as one will be caught instantly. Even if it were all demil, run-rate is ~\$115M/yr. Citing Hawthorne also invites the reader to discover that the Army has just locked its largest small-arms demil venue away until 2046 — which is an argument against the deck's own market slide.

General Dynamics Ordnance and Tactical Systems

T3 / 02

Business unit of **General Dynamics Corporation** (NYSE: GD), Combat Systems group.

YEARS IN BUSINESS	Parent founded 1952 — 74 years; GD-OTS assembled from Primex/Olin ordnance acquisitions from 2001.
HEADQUARTERS	St. Petersburg, Florida, USA. Demil operations at Carthage, Missouri and Marion, Illinois; eastern field office New Tripoli, Pennsylvania.
OPERATING MARKETS	US and allied/NATO. DoD services, foreign militaries, commercial and industrial energetics customers.
REVENUE	Parent \$52.6bn (FY2025) , +10.1%. Division revenue not separately reported.
SERVICES	Full demil and explosive-waste disposal — characterization, analysis, transportation, storage, treatment, disposal. Documented mechanical processes: de-linking ammunition, defuzing projectiles, sawing warheads and rocket motors, disassembling cluster munitions and MLRS rockets . Handles ammunition, projectiles, warheads, rocket motors, aircraft flares, ICM/submunitions, CBU's. RCRA, MACT, NPDES compliant; ATF-regulated. Fixed-site. Divested its EBV Explosives demil/incineration business (Joplin, MO) to Heritage/Arcwood on 1 October 2024.
CONTRACTED WITH	One of three awardees on the \$110.1M ACC–Rock Island conventional ammunition demil MAC. Named by Army PM Demil (Oct 2025) as one of five commercial demil performers.
SITE	gdots.com

WHAT IT MEANS FOR TWB

Establishes the shape of the US Army's commercial demil vehicle: **three seats — one PE-backed micro-cap, one European prime's US arm, one US prime**. Any TWB entry into US Army demil means winning the recompete or acquiring a seat. Their EBV divestment also tells you a prime concluded commercial demil incineration was not worth holding.

Arcwood Environmental — formerly Heritage / EBV Explosives

Majority owned by **EQT Infrastructure VI** (EQT AB); The Heritage Group retains a minority. Announced 11 Dec 2023, closed Q1 2024; rebranded Heritage → Arcwood March 2025. Bought EBV out of General Dynamics 1 October 2024.

YEARS IN BUSINESS	Heritage founded 1970 — 56 years; the Joplin explosives business operating since 1988.
HEADQUARTERS	Indianapolis, Indiana, USA. Demil site: Joplin, Missouri — 55 acres.
OPERATING MARKETS	United States, ~37 facilities, ~1,600 employees, ~660,000 tons of industrial waste a year for 1,800+ customers. Commercial, industrial, government/DoD and law enforcement .
REVENUE	Not disclosed; no purchase price published for either the EQT stake or EBV. Indicative \$500–700M/yr [est.] — from 1,600 employees and 660,000 t/yr across 37 facilities, benchmarked to Clean Harbors' revenue per employee. Wide band; indicative only.
SERVICES	Rotary kiln incinerator, car-bottom furnace, eleven thermal treatment units and automated demilitarization lines; ~310,000 cumulative tons. Explosives classes 1.1 through 1.6. Defence work includes ammunition de-linking, projectile defuzing and cluster-munitions disassembly. Its law-enforcement service page names "Law Enforcement: Small arms ammunition" as an explicit line , alongside airbag inflators. Materials recovery and resale is part of the offer. Missouri DNR hazardous-waste TSD permit MOD985798164. Fixed-site only — the material must be transported to Joplin.
CONTRACTED WITH	Named by Army PM Demil (Oct 2025) as a commercial demil performer.
SITE	arcwoodenviro.com

WHAT IT MEANS FOR TWB

Not previously on the list, and it should have been. **The best-capitalised competitor for US law-enforcement small-arms revenue**, with EQT behind it and \$80M of facility capex in 2025 alone. Fixed-site, so the custody wedge holds against it — but it is the company most able to fund a mobile answer if TWB proves the market.

Private, founder-held — Duane Goetsch. Subchapter S corporation. No PE backer. SBA Tibbetts Award, 2001.

YEARS IN BUSINESS	Founded 1994 — 32 years; operating at NSA Crane since 2001.
HEADQUARTERS	Elk River, Minnesota, USA — 11080 Industrial Circle NW. Operating demil site at NSA-Crane, Indiana.
OPERATING MARKETS	US DoD (Army, Navy, Air Force), US Army Corps of Engineers, select foreign militaries.
REVENUE	Not disclosed. No public filings; third-party aggregator estimates are unsourced and should not be used.
SERVICES	High-pressure abrasive waterjet cut-and-washout — the industry-standard "cold" demil process. Explosive D-filled Navy gun ammunition from 3"/50 up to 16"/50 battleship projectiles, UXO and discarded military munitions; chemical/biological under development. Both fixed-site (Crane) and field-deployable , including underwater ordnance remediation. Demonstrations at Culebra, Vieques and Ordnance Reef. 30+ major projects since 1997. Also engineering, custom fabrication and pilot-plant work.
CONTRACTED WITH	Site partner with Crane Army Ammunition Activity; DoD-funded underwater technology demonstrations. Named by Army PM Demil (Oct 2025) as one of five commercial demil performers. Holds 350,000+ projectiles processed at Crane since 2001.
SITE	gradtech.com

WHAT IT MEANS FOR TWB

The Year-1 answer, and the deck has it wrong. Dissolution is the wrong process — washout and meltout are the standard (NASEM 2019; IATG 10.10). Gradient's core patent US6777586B1, which claims exactly the cut-then-selectively-dissolve process the deck gestures at, **expired in May 2023: no licence is needed.** What is needed is a supply agreement, a teaming agreement, or an acquisition. "Name TBC" against three fielded incumbents does not survive a technical diligence session.

El Dorado Engineering, Inc.

TARGET · 3rd

T3 / 05

Private, US. Subchapter S corporation. No parent or PE backer identified.

YEARS IN BUSINESS	Founded August 1981 — 45 years. Federal registration since 2002; most recent federal award 6 March 2026.
HEADQUARTERS	West Jordan, Utah (Salt Lake City metro), USA — 9089 South 1300 West, Suite 150.
OPERATING MARKETS	US and international. DoD services, Army Corps, state National Guards, allied governments.
REVENUE	Not disclosed. Primary NAICS 333994 — Industrial Process Furnace and Oven Manufacturing. GSA schedule holder.
SERVICES	The most directly comparable engineering house to TWB. Transportable Flashing Furnace (TFF) , Contained Burn Systems at large and small scale, Explosive Waste Incinerator, Contaminated Waste Processor, plus OB/OD engineering, robotics and automation, pollution control, air modelling and RCRA permitting support . Destroys propellant, energetics, explosive-contaminated debris, conventional and chemical weapons. Both transportable and fixed-site.
CONTRACTED WITH	Designed and installed the Contained Burn System at Camp Minden, Louisiana for ~16 million pounds of M6 propellant, with ESI as prime. Named designer/consultant in EPA demil records. GSA schedule.
SITE	eldoradoengineering.com

WHAT IT MEANS FOR TWB

A trailer-mounted furnace at up to **10,000 lb/hr** — TWB's mobility and metals-recovery claim, at 167× the throughput, from a 45-year incumbent. This is the reason the throughput conversation must never be entered. It is also, on the other side of the ledger, **the best technology fit in the entire acquisition target set**: a 1981-vintage independent S-corp with the permitting and air-modelling expertise TWB will need in every new jurisdiction.

General Atomics — GA-EMS

T3 / 06

Private, family-owned (Blue family). No ticker.

YEARS IN BUSINESS	Founded 1955 — 71 years
HEADQUARTERS	San Diego, California, USA.
OPERATING MARKETS	US DoD, DOE, international allies; also commercial nuclear, space and energy.
REVENUE	Not disclosed — General Atomics is private and does not report. Widely circulated third-party estimates are unsourced; no figure should be published.
SERVICES	Cryofracture — munitions cooled in liquid nitrogen and hydraulically fractured, then energetics thermally destroyed, typically feeding a rotary kiln. Handles small to medium munitions; GA states destruction of well over 500,000 (elsewhere over a million) such munitions. The prototype system is portable/transportable ; production installations such as the Munitions Cryofracture Demilitarization Facility at McAlester AAP are fixed-site.
CONTRACTED WITH	July 2018 award under Other Transaction W15QKN-14-9-1001 (US Army ARDEC) to upgrade the portable prototype and interface it with a rotary kiln at Crane Army Ammunition Activity. Value not disclosed. Sole-source position.
SITE	ga.com

WHAT IT MEANS FOR TWB

The third of the three incumbents standing where Year 1 wants to go: transportable, robotic feed, over a million munitions destroyed, sole-source. Together with Gradient and El Dorado they make the case that the energetics front end is not white space — and that **adding one destroys the custody wedge**, because an energetics front end brings multi-container setup, a ten-day install and fifteen crew per shift.

Clean Harbors, Inc.

Public — **NYSE: CLH**. Incorporated in Massachusetts.

YEARS IN BUSINESS	Founded 1980 — 46 years
HEADQUARTERS	Norwell, Massachusetts, USA — 42 Longwater Drive.
OPERATING MARKETS	United States, Canada, Puerto Rico, Mexico. Industrial, government including DoD, energy, retail, healthcare.
REVENUE	\$6.03bn (FY2025) across Environmental Services and Safety-Kleen; TTM \$6.24bn, net income \$439.1M, EV \$19.21bn, EV/EBITDA 16.1x, EV/Revenue ~3.1x .
SERVICES	Clean Harbors states its Colfax, Louisiana facility is "the only commercial RCRA Part B, Subpart X permitted explosive ordnance disposal facility in the United States." Accepts confiscated fireworks, ammunition and manufactured explosives; propellants and rocket motors; riot-control articles and flares; explosives from demilitarization operations; missile propellants; explosive-contaminated debris; airbag inflators; ejection systems; det cord and detonators. Colfax has historically operated by open burn / open detonation on burn trays . Also El Dorado, Arkansas incineration. Fixed-site .
CONTRACTED WITH	Federal and state EOD and reactive-waste disposal; Colfax is the destination for a large share of DoD-generated confiscated and demil-origin explosives.
SITE	cleanharbors.com

WHAT IT MEANS FOR TWB

The single most important incumbent for TWB to understand, and the clearest statement of the problem: the commercial destination for confiscated ammunition in the United States is one open-burn site in Louisiana, documented by ProPublica at ~1.7 million pounds burned in open air in a year, with Louisiana DEQ having signalled permit denial in 2019–20. Attribute the "only permitted facility" line to Clean Harbors rather than repeating it as neutral fact — but if it holds, every gram of material crosses the country to get there.

Explosive Service International, Inc. (ESI)

TARGET

T3 / 08

Private; veteran-owned small business, Louisiana.

YEARS IN BUSINESS	Self-described as over 28 years in its 2015 Camp Minden proposal, implying founding c. 1987 — ~39 years.
HEADQUARTERS	Baton Rouge, Louisiana, USA — 9985 Baringer Foreman Road.
OPERATING MARKETS	Louisiana and the Gulf of Mexico primarily; describes itself as the largest explosive demolition and marine salvage contractor in that region. State National Guard, DoD, oil and gas.
REVENUE	Not disclosed. Largest known award ~\$21.3M across three phases.
SERVICES	Explosive demolition and disposal, marine salvage, licensed explosive manufacture (200,000+ lb/yr of 1.1 explosives), patented explosive cutting tools. On demil: prime contractor for contained burn and rotary kiln propellant destruction, delivered as a mobile plant erected at the customer's site — architecturally the closest precedent to TWB's deploy-to-site model, at bulk-propellant scale.
CONTRACTED WITH	Camp Minden, Louisiana M6 propellant disposal (2015–16) for the Louisiana Military Department under EPA oversight — ~15–16 million pounds. Priced a kiln system at \$21,332,292 total (mobilisation \$6,763,449; operations \$14,293,200; restoration \$275,643); the contained-burn option, engineered with El Dorado, was the one executed.
SITE	bbb.org

WHAT IT MEANS FOR TWB

No stable corporate website was verified — do not cite a URL without checking. Two uses: their **\$1,800/ton contained-thermal bid price is the correct footnote** for that number, which is wrong as a general conventional-demil anchor but right as an ESI bid; and they executed the highest-profile contained-burn destruction in recent US history under public and regulatory scrutiny, which is the operational validation TWB's model depends on.

Amentum Holdings, Inc.

Public — **NYSE: AMTM**. Formed 2024 via Reverse Morris Trust with Jacobs' Critical Mission Solutions.

YEARS IN BUSINESS	Amentum brand established 2020 — 6 years; lineage through AECOM Management Services, URS and Washington Group on the chemical-demil programmes.
HEADQUARTERS	Chantilly, Virginia, USA. ~80 countries.
OPERATING MARKETS	DoD, DOE, DTRA, intelligence community, NASA, UK MOD, allied governments.
REVENUE	\$14.4bn (FY2025, year ended 3 Oct 2025) ; adjusted EBITDA \$1.104bn. EV \$8.31bn, EV/EBITDA 8.3x, EV/Revenue ~0.6x .
SERVICES	Operates the Anniston Static Detonation Chamber — Dynasafe technology — at Anniston Army Depot, Alabama. Destroyed chemical-agent-filled munitions Nov 2010–Sept 2011, then transitioned April 2012 to conventional non-chemical munitions and energetics, including components stripped from chemical munitions at Pueblo. Nuclear D&D, environmental remediation, EOD and range clearance. Fixed-site . An operator of other people's destruction technology, not a mobile-system vendor.
CONTRACTED WITH	Anniston SDC operations under the Army's ACWA mission; completed support to Colorado and Kentucky April 2025. Seat on the Army's \$3.2bn Gateway to Sustainment IDIQ (Aug 2023) — a ceiling, not spend. DTRA prime contract 2025.
SITE	amentum.com

WHAT IT MEANS FOR TWB

The scale player in government destruction services, and the sobering valuation datapoint: **8.3x EV/EBITDA and ~0.6x EV/Revenue** is what the market pays when a demil business is labelled "services" rather than "product." It is also proof that the chamber technology TWB competes with is already operated inside US Army depots by a \$14bn prime.

American Ordnance LLC

Private; one of the Day & Zimmermann family of companies. Originally a D&Z / ATK joint venture; current equity split not disclosed.

YEARS IN BUSINESS	Operating contractor at Iowa AAP since 1998 — 28 years; Iowa and Milan awarded jointly 2008.
HEADQUARTERS	Iowa Army Ammunition Plant, Middletown, Iowa, USA. Second site: Milan Army Ammunition Plant, Milan, Tennessee.
OPERATING MARKETS	US only. Sole customer set is the US Government (Army/JMC) plus allied FMS through prime contracts.
REVENUE	Not disclosed; not broken out from Day & Zimmermann's \$2.9bn.
SERVICES	Load-Assemble-Pack of tank rounds, artillery projectiles, mortars, 40mm grenades, warheads and missile components — and demilitarization as a listed service line . Large calibre, artillery, mortar and grenade; not a small-arms specialist. Fixed-site GOCO . Iowa AAP and Milan AAP both hold OB/OD authority under JMC's programme.
CONTRACTED WITH	Operating contractor for Iowa AAP and Milan AAP, ACC—Rock Island. Contract numbers and obligated values not publicly retrievable. Named alongside GD-OTS on a \$511M Army mortar propelling-charge supply contract — production, not demol.
SITE	aolc.biz

WHAT IT MEANS FOR TWB

A GOCO operator holding OB/OD authority at two plants. Relevant because it shows where the Army's own capacity sits and under whose management — and because JMC publicly defends open burning on the grounds that preprocessing exposes personnel to more hazard. That is the argument mobile point-of-storage destruction answers directly.

PIKA International, Inc.

Private, founder/management-owned. Subchapter S. Minority Owned Business, self-certified Small Disadvantaged Business.

YEARS IN BUSINESS	Founded 2003 — 23 years; SAM registration March 2004.
HEADQUARTERS	Stafford, Texas, USA — 12723 Capricorn St., Ste 500.
OPERATING MARKETS	US federal, DoD-dominant; FUDS and BRAC sites, plus OCONUS work including Kuwait. Also commercial oilfield services.
REVENUE	ZoomInfo estimate \$19.7M. Verifiable federal figure: \$253.3M total federal obligations across 297 awards , DoD \$208M over 212 actions. FY2024 obligations \$31.9M falling to FY2025 \$9.3M — a sharp decline.
SERVICES	Munitions response and environmental remediation, not ammunition destruction as a product. MEC/UXO location and removal, MPPEH/MDEH processing, firing-range management, explosives-contaminated soil remediation, radiological services. Its destruction technology is the Thermal Convection System — a portable, remotely operable contained thermal unit (>2,000 ft standoff, ±10°F control) that thermally neutralises explosives residues in building materials, equipment and debris to achieve MDAS certification.
CONTRACTED WITH	CAGE 3SEM1, SAM to 4 Dec 2026, primary NAICS 562910. Holds a BATFE explosives licence and a US NRC broad-scope radioactive materials licence. GSA schedule GS-10F-0202U. Vieques and Lone Star AAP project histories.
SITE	pikainc.com

WHAT IT MEANS FOR TWB

Not an ammunition-destruction competitor and should be reclassified. Their portable thermal unit treats explosives residues on debris, not ammunition. Keeping PIKA in a battlecard as a rival reads as unserious to anyone who checks — the same is true of Ordnance Holdings (a UXO staffing, GIS and industry-news firm), Tradebe and Veolia (general hazardous waste, no Subpart X munitions line) and Perma-Fix (nuclear and mixed waste, zero munitions mention in its FY2025 results).

The law-enforcement channel

The real incumbent in the police market is a price of zero. Free destruction, steel mills, county burners and burn boxes sold outright are what a sheriff compares TWB to — not Dynasafe.

Free — GunBusters, steel mills, county waste authorities, in-house EOD

T4 / 01

Various. GunBusters, LLC is private and founder-owned (Raymond Reynolds) with a nationwide licensee/franchise network.

YEARS IN BUSINESS	GunBusters founded 2015 per ZoomInfo — 11 years; the pulverizer was publicly introduced September 2013.
HEADQUARTERS	GunBusters: Chesterfield, Missouri, USA — 743 Spirit 40 Park Dr, Ste 111. Licensee offices nationwide.
OPERATING MARKETS	US state and local law enforcement, nationwide. GunBusters claims work with ~1,000 agencies.
REVENUE	GunBusters not disclosed; ZoomInfo band under \$5M, 11–50 employees. Network-wide revenue is larger than the entity's own. Parts salvage reported at ~\$90K/week.
SERVICES	Firearms only — no ammunition, no narcotics. Patented pulverizer destroys confiscated and buyback firearms one at a time, with computer and video verification searchable by serial number. Over 250,000 firearms destroyed. The service is free , funded by salvaging and reselling component parts. Mobile/on-site via the licensee network plus fixed pulverizer sites. Alongside it: agencies use steel mills and county waste-authority burners at no cost, and in-house EOD units.
CONTRACTED WITH	No federal prime awards. Municipal and county agencies directly. Michigan State Police contract paused January 2024.
SITE	gunbustersusa.com

WHAT IT MEANS FOR TWB

The competition in the police channel is mostly zero dollars. Pennsylvania State Police destroyed 6,000+ guns in three years at no cost; Lancaster County agencies use steel mills and the county burner for free; RCMP ammunition disposal — TWB's flagship reference — is procured competitively on **lowest price**, most recently \$38,850 for nine months with two bidders. GunBusters' 2024 collapse in Texas, Michigan and Maine happened **because documentary proof of destruction turned out not to be destruction** — the clearest evidence anywhere that agencies change vendors over custody and verification.

Elastec, Inc. — Drug Terminator

T4 / 02

100% employee-owned (ESOP). CEO Mark Hilliard.

YEARS IN BUSINESS	Founded 1990 — 36 years
HEADQUARTERS	Carmi, Illinois, USA — 1309 W Main St. Sites in Fairfield IL, Cocoa FL, Torrance CA.
OPERATING MARKETS	Global — products distributed in 155 countries. US federal (GSA), state and local law enforcement, military, medical facilities, airport customs, plus its core oil-spill-response market.
REVENUE	\$36.1M (ZoomInfo estimate, company-wide across all product lines), 51–200 employees. The drug-destruction line is a small fraction; no segment revenue disclosed.
SERVICES	Drug Terminator — a portable cyclonic incinerator head that clamps onto a standard 55-gallon drum, burning wood or charcoal with high-velocity air blowers, reducing material to 1–3% ash. Destroys prescription drugs, confiscated narcotics, paraphernalia and lab materials, and sterilises metal items. Portable but not trailer-mounted, and it does not destroy ammunition or firearms.
CONTRACTED WITH	GSA contract 47QSWA19D0007. Sells to law enforcement, military, hospitals and customs; also via resellers.
SITE	drugterminator.com

WHAT IT MEANS FOR TWB

Sets the price and the expectation in the narcotics half of the seized-property conversation. An agency that has bought a \$10K drum head does not automatically understand why a trailer costs what it costs. Any narcotics positioning has to clear Elastec, Firelake and Inciner8 before it reaches Dynasafe.

Firelake Manufacturing

T4 / 03

Private, owner-operated. President & CEO Kent Wischmann. Roots in a 1950s commercial-equipment manufacturer.

YEARS IN BUSINESS	Manufacturing lineage from the 1950s; current ownership structure since 1971 — 55 years. No single clean founding date is published.
HEADQUARTERS	Hutchinson, Minnesota, USA — 373 Highway 7 East. Second facility at Mount Sidney, Virginia.
OPERATING MARKETS	US and Canada plus other continents via dealers. State and local law enforcement, agriculture, veterinary, medical waste, municipal, cannabis waste, education. No federal contract posture.
REVENUE	Not disclosed. ZoomInfo band under \$5M, 1–10 employees; the About page names a seven-person team. Indicative \$2–5M [est.].
SERVICES	Manufactures incinerators and crematoriums; sells equipment, does not provide destruction as a service. The LE product is the Model P50-SC8 mobile incinerator on a 26-ft trailer — 1,650 lb / 42 cu ft chamber, remote-controlled E-Door loading, onboard generator, air-ride suspension — marketed for evidence destruction, drug disposal and emergency response. No ammunition or firearms capability is stated anywhere on the product pages.
CONTRACTED WITH	No named agency customers, no CAGE/SAM record, no federal awards. Sells through dealers.
SITE	firelakeincinerators.com

WHAT IT MEANS FOR TWB

A trailer-mounted burn box sold outright to sheriffs for evidence and narcotics. It is not an ammunition competitor, but it is what a procurement officer will price TWB against when the requisition says "mobile incinerator" — which is an argument for never letting the requisition say that.

Inciner8 Limited

Private UK limited company, no. 04866401, under Inciner8 Holdings Limited. No PE backer identified.

YEARS IN BUSINESS	Incorporated 14 August 2003 — 23 years. Formerly Statusred Limited, then ACME Europe Limited until January 2005.
HEADQUARTERS	Burscough, Ormskirk, Lancashire, England, UK — Unit 4 Barracuda Way, L40 7BP.
OPERATING MARKETS	190+ countries. Police and anti-narcotics units, military, UN, WHO, Red Cross, hospitals, mining camps, disaster response. Named LE customers include Cottonwood PD (AZ), Asheville PD (NC), Phoenix PD, Lexington Police and Bolivian anti-narcotics teams. Stated North America push.
REVENUE	Not disclosed. Companies House filings exist (last accounts to 30 April 2025) but figures were not pulled; a real UK turnover figure is retrievable from the abbreviated filings.
SERVICES	Manufactures incineration systems — medical, agricultural, municipal, industrial, military camp waste, and drug and contraband incinerators . Configurations include containerised, skid-mounted and trailer-mounted mobile units with backup generators for off-grid operation. CE marked, ISO rated, DEFRA approved. Ammunition and weapons destruction is not offered — the contraband line is narcotics and seized goods only. Equipment vendor, not a service provider.
CONTRACTED WITH	No US CAGE/SAM record. Sells direct and via distributors; UN, WHO and Red Cross cited on its own site as institutional customers — a company claim, not a cited award.
SITE	inciner8.com

WHAT IT MEANS FOR TWB

The global-scale version of the burn-box problem: trailer-mounted, off-grid, sold into 190 countries and already inside police forces on three continents. Against ammunition they have nothing. Against "we need something mobile that destroys what we seize," they are already in the building.

Mine action, UXO and sensing

Not the market. Charities and labour-arbitrage clearance operators with no capex budget, plus detection specialists who destroy nothing. Profiled so the deck can say why this segment is excluded — and so the one real buyer inside it is not missed.

UN Mine Action Service (UNMAS)

T5 / 01

UN body — a service of the UN Department of Peace Operations, Office of Rule of Law and Security Institutions. **A buyer, not a competitor.**

YEARS IN BUSINESS	Established 1997 — 29 years
HEADQUARTERS	New York, USA (UN Secretariat), with a global operations hub at Entebbe, Uganda.
OPERATING MARKETS	South Sudan, Central African Republic, Libya, Lebanon, Somalia, Iraq, Afghanistan, Ethiopia, Ukraine, oPt/Gaza, Syria, Sudan, DRC, Abyei.
REVENUE	Funded by peacekeeping assessed contributions plus the Voluntary Trust Fund for Assistance in Mine Action. Per A/80/272, voluntary contributions fell from \$125M to \$46M over seven years . No consolidated annual budget is published in extractable form — do not quote a total.
SERVICES	Procures destruction capability. Three procurements in eight months in exactly TWB's category: RFIUNPD23322 (Dec 2024, incinerator-based ammunition destruction); RFIUNPD23632 (5 May – 5 June 2025) for a Mobile Ammunition Destruction System, "mechanical destruction of small arms ammunition of all types and calibres up to a maximum of 12.7mm , including shotgun ammunition and pyrotechnics," beneficiary Uganda; and EOIUNPD23750 (8 July – 15 Aug 2025), Mobile Ammunition Disposal System for global operations — transportable, fits a standard 20-ft container, minimum 40 kg/hour, operating range 5°C to 45°C, small arms to 13mm plus shotgun and pyrotechnics.
CONTRACTED WITH	Contract values not disclosed in either notice. Focal point named in the notices at the UN Procurement Division. Relevant standards: IMAS 11.20, IMAS 11.10, IATG 10.10.
SITE	ungm.org

WHAT IT MEANS FOR TWB

The one real buyer inside a segment that is otherwise not a market — and 12.7mm is .50 calibre. Two design gaps to close before approaching: UNMAS asked for **mechanical** destruction, framed as an environmental alternative to open burning, so a closed chamber must be argued against Level 2 criteria under IATG 10.10; and they specified a **container**, not a trailer. Both RFIs have closed. The actionable step is registering on UNGM and contacting UNPD about the MADS outcome ahead of any re-tender.

Mines Advisory Group (MAG)

T5 / 02

Registered charity, England & Wales no. 1083008; company limited by guarantee.

YEARS IN BUSINESS	Founded 1989 — 37 years
HEADQUARTERS	Manchester, England, UK.
OPERATING MARKETS	38 countries (2024). Donor-funded; no commercial customer base.
REVENUE	£99.27M income against £99.50M expenditure, year ended 31 December 2024 — a deficit. Prior year £91.92M / £92.40M. 5,809 staff — £17,129 per employee, all-in.
SERVICES	Landmines including improvised, cluster munitions, UXO, artillery and mortar, small arms ammunition, SALW, armoury construction, weapons marking. Destroys in place — field demolition and burning; no industrial plant, no shipping out. 2024: 81,050 explosive ordnance items removed or destroyed, 10,211,438 rounds of small arms ammunition destroyed , 27,214 SALW destroyed, 50 armouries built or refurbished. Works to IMAS/IATG.
CONTRACTED WITH	US Department of State, UK FCDO (including a £6.6M Ukraine award, 2023), German Federal Foreign Office, Norwegian MFA, Government of Japan, EU via UNDP, DFAT Australia.
SITE	maginternational.org

WHAT IT MEANS FOR TWB

The single clearest reason this segment is not the market. MAG destroyed ten million rounds of small arms ammunition in 2024 by open burning, using donor-funded explosives and already-paid-for national staff, at a marginal cost near zero — and still ran a deficit. You cannot price a technology margin into a tender where a 5,800-person charity is the reference bidder, and a charity cannot buy a capital asset because donors fund activities and headcount.

The HALO Trust

Registered charity — England & Wales 1001813, Scotland SC037870; US 501(c)(3) affiliate.

YEARS IN BUSINESS	Founded 1988 — 38 years
HEADQUARTERS	Thornhill, Dumfries, Scotland, UK.
OPERATING MARKETS	30 countries FY24/25 — Afghanistan, Angola, Cambodia, Colombia, Iraq, Syria, Ukraine, Yemen and more. Donor governments, not commercial buyers.
REVENUE	£155.65M income against £157.99M expenditure, year ended 31 March 2024 — a deficit. 10,932 average staff — £14,452 per employee, all-in. 96% locally employed; 272 international, 142 UK/Europe. FY2024/25 income and expenditure could not be extracted from the filed PDF and should not be quoted.
SERVICES	Landmines, cluster munitions, UXO, small arms ammunition, SALW and weapons and ammunition management. Destroys in place — open detonation and open burning on site under IMAS 11.20; operates no industrial demil plant. FY24/25: 48,507 landmines, 75,446 UXO, 12,733 cluster munitions, 194,447 rounds small arms ammunition, 8,544 ha released.
CONTRACTED WITH	US Department of State PM/WRA, UK FCDO, Germany, France, Netherlands, Irish Aid, EU institutions, Switzerland, Canada, Norway, Luxembourg, NATO.
SITE	halotrust.org

WHAT IT MEANS FOR TWB

Same structure as MAG, one-third larger. Both spend essentially every pound they raise; there is no margin pool to fund capital equipment. Norwegian People's Aid states the sector's settled doctrine outright — "industrial ammunition destruction is beyond the reach of many countries" — and co-founded SHADOW with Fenix Insight precisely to promote **low-tech, low-cost** national destruction.

Black Tusk Geophysics Inc.

T5 / 04

Private, independent Canadian company. No parent or PE backer.

YEARS IN BUSINESS	Founded 24 September 2012 — 14 years; US federal contractor registration January 2013.
HEADQUARTERS	Vancouver, British Columbia, Canada — 1755 Broadway W.
OPERATING MARKETS	North America. US DoD munitions response programmes; subcontracts to prime remediation contractors.
REVENUE	Not disclosed. Federal award values restricted on public profiles; most recent award recorded 17 December 2025; holds/has held W912HQ19C0023.
SERVICES	Detection and classification only — no clearance, no removal, no destruction. Advanced geophysical classification, dynamic and cued MPV acquisition, borehole classification for deeply buried ordnance, marine classification. Owns the UltraTEM sensor line (co-developed with Gap EOD, Australia) and the MPV; processes MetalMapper and TEMTADS 2x2 data. Owns two software products: BTField (acquisition/processing) and UXOLab (classification, DAGCAP-validated).
CONTRACTED WITH	ISO/IEC 17025 under the DoD Advanced Geophysical Classification Accreditation Program — A2LA Certificate No. 4275.01, accredited 12 July 2017, current scope expires 31 July 2027. US Army Corps of Engineers / ESTCP-type munitions response work. Primary NAICS 541360.
SITE	btgeophysics.com

WHAT IT MEANS FOR TWB

One call replaces the entire Year-2 sensing milestone. A Canadian company already holds the DoD accreditation the deck proposes spending two years developing toward — and MIT is the wrong institution for metals-discrimination sensing: no lab, no PI, no programme. The real field is NRL, Berkeley Lab, Dartmouth (Shubitidze) and Duke (Collins), procurable and DAGCAP-accredited since 2017. Treat Black Tusk defensively too: if a US clearance prime buys them, TWB loses the cleanest Canadian route in this market.

Tetra Tech, Inc.

T5 / 05

Public — **NASDAQ: TTEK.**

YEARS IN BUSINESS	Founded 1966 — 60 years
HEADQUARTERS	Pasadena, California, USA — 3475 East Foothill Boulevard.
OPERATING MARKETS	US federal, state and local government; international development; commercial. US federal 31.6% of FY2025 revenue; DoD 11.6%; USAID 10.6%.
REVENUE	\$5.4bn gross / \$4.6bn net revenue, FY ended 28 September 2025. Net income \$247.7M; backlog \$4.1bn.
SERVICES	Environmental remediation and munitions response (MMRP). DAGCAP-accredited, A2LA, to 30 September 2027. Advanced geophysical classification, digital geophysical mapping, MEC removal. Destruction is by open detonation or blow-in-place on site under USACE range procedures — Tetra Tech does not operate a demil plant.
CONTRACTED WITH	US Army Corps of Engineers MMRP task orders; US EPA \$94M single-award environmental emergency response contract; DoD; USAID.
SITE	tetratech.com

WHAT IT MEANS FOR TWB

Munitions response is **not broken out anywhere** in the 10-K — it is immaterial inside a \$5.4bn business. The wider point for the deck: the whole USACE MAMMS III vehicle (\$240M ceiling, awarded 2021) has obligated only **\$79.4M in about four and a half years across all awardees**, roughly \$16M/year. These firms sell hours, not hardware, and buying a machine would cannibalise the billing.

Janus Global Operations — Acuity International

T5 / 06

Private, PE-backed. Acquired by **DC Capital Partners** (2017); folded into Caliburn International, rebranded Acuity International (2018). Formed from the 2015 merger of Sterling Global Operations and EOD Technology.

YEARS IN BUSINESS	Predecessor EOD Technology founded 1987; Janus name from 2015 — 11 years.
HEADQUARTERS	Lenoir City / Knoxville, Tennessee, USA. Acuity International parent: Reston, Virginia.
OPERATING MARKETS	US federal (USACE, DoD, State Department), Iraq, Middle East, Africa, Ukraine. ~2,800 employees at parent.
REVENUE	Not disclosed — privately held, no filed segment accounts.
SERVICES	EOD, humanitarian demining, munitions response and demilitarization services , IED disposal, stockpile management, base operations. Destroys in place or on designated demolition ranges. Holds a DAGCAP-scope A2LA accreditation (Cert. 5347.01).
CONTRACTED WITH	USACE MAMMS III — seat on the \$240M multiple-award IDIQ, June 2021 (Baltimore District, W912DR, through 18 September 2028). Historically US State Department Iraq conventional weapons destruction.
SITE	acuityinternational.com

WHAT IT MEANS FOR TWB

One of sixteen DAGCAP-accredited munitions-response contractors competing for a vehicle that spends ~\$16M a year in total. MAMMS IV is in pre-solicitation (W912DR27RA001) — worth watching, but as evidence of how thin this pool is, not as a revenue plan.

SafeLane Global · Igne · Gap EOD · Fenix Insight · The Development Initiative · USA

Environmental

TARGET

T5 / 07

SafeLane Global and Igne: private equity — Solix Group . Lineage runs BACTEC (1991) → Dynasafe BACTEC (2015) → SafeLane Global (2018) → Igne UXO Ltd (2023). Dynasafe AB has had no ownership since 2017–18 . Gap EOD: private, Australian. Fenix Insight: private UK, founded 2011 by David Hewitson and Colin King. TDI: private UK limited, 2005. USA Environmental: private, certified small business, 1998.	
YEARS IN BUSINESS	BACTEC 1991 — 35 years; Igne entities incorporated 2023; Fenix 2011 — 15 years; TDI 2005 — 21 years; USA Environmental 1998 — 28 years.
HEADQUARTERS	Igne: Ross-on-Wye, Herefordshire, UK. SafeLane Global: Forest of Dean, Gloucestershire, UK. Gap EOD: Brendale, Queensland, Australia. Fenix Insight: UK. TDI: UK. USA Environmental: Oldsmar (Tampa Bay), Florida, USA.
OPERATING MARKETS	Igne: UK construction and infrastructure only. SafeLane: Iraq, Afghanistan, Zimbabwe, Germany, Denmark, Azerbaijan, DRC, Kuwait; offshore wind and energy. Gap EOD: Australia, US, international, onshore and offshore. Fenix: 50+ countries. USA Environmental: US and international, government and private.
REVENUE	Igne UXO Limited: £11.41M turnover, FY to 31 Dec 2024 ≈ USD 14.6M ; net assets £4.72M; 33 employees. SafeLane Global, Gap EOD, Fenix Insight, TDI and USA Environmental: not disclosed.
SERVICES	None of them destroy customer stockpiles. Igne : UK pre-construction UXO risk mitigation — survey, risk assessment, detection, with disposal escalated to EOD teams or police. SafeLane Global : land and marine UXO clearance, IED threat mitigation, canine detection, training. Gap EOD : manufactures the UltraTEM sensor family; detection and characterisation only. Fenix Insight : munitions OSINT and technical analysis, ordnance identification, war-crimes investigation support, inert surrogates — products METIS and IRIS, a database of 6,200+ munition records. TDI : landmine clearance, weapons and ammunition management, EOD, explosive detection dogs. USA Environmental : MEC characterisation and remediation, DAGCAP-accredited geophysics, underwater MEC with dive teams and ROVs.
CONTRACTED WITH	SafeLane: offshore wind and energy developers, national governments, humanitarian donors. Fenix: co-launched the SHADOW programme with Norwegian People's Aid. TDI: UN and peacekeeping entities. USA Environmental: the USAE-CAPE joint venture holds the EMR2 munitions-response contract, \$960M ceiling, awarded October 2024.
SITE	igne.com

WHAT IT MEANS FOR TWB

Two corrections and one opportunity. **Correction:** Dynasafe BACTEC is no longer Dynasafe — it is Igne, under Solix — and repeating the old lineage in a competitor set will be caught. **Correction:** these are detection, analysis and clearance firms; none is a destruction competitor. **Opportunity:** Fenix is the sector's reference authority on ordnance identification and a credentialing partner rather than a buyer; and USA Environmental's \$960M-ceiling vehicle is the kind of asset that is normally the most valuable and least replicable thing in a services acquisition — though set-aside status frequently does not survive a change of control.

Acquirers, targets and comparables

The buy-and-build set. Who is consolidating this sector, what they pay, and which assets are genuinely acquirable at the scale the ten-year plan assumes.

Cadre Holdings, Inc.

T6 / 01

Public — **NYSE: CDRE**. Chairman/CEO Warren B. Kanders, controlling shareholder. Brands: Safariland, Med-Eng, ICOR, Cyalume, Alpha Safety, Carr's, TYR Tactical.

YEARS IN BUSINESS	Cadre Holdings incorporated 2021, IPO November 2021 — 5 years; core brand Safariland founded 1964.
HEADQUARTERS	Jacksonville, Florida, USA.
OPERATING MARKETS	North America, EMEA, Asia-Pacific; 100+ countries. Federal, state and municipal law enforcement, military, EOD/CBRNE teams, nuclear operators, first responders.
REVENUE	FY2025 net sales \$610.3M ; net income \$44.1M; adjusted EBITDA \$111.7M (18.3% margin); gross margin 42.5%. FY2026 guidance \$736–758M. Market data 25 Aug 2026: market cap \$1.34bn, EV \$1.69bn, TTM revenue \$685.7M, EV/Revenue 2.50x, EV/EBITDA 16.16x .
SERVICES	Body armour and ballistic protection, duty gear, bomb suits and EOD tools (Med-Eng), EOD and tactical robots (ICOR CALIBER), chemical illumination (Cyalume), nuclear safety containment and remote-handling robotics (Alpha Safety, Carr's), crowd control. Cadre does not destroy munitions — it sells EOD and protection hardware.
CONTRACTED WITH	FBI ballistic provider (Safariland, June 2026); \$86M in contracts from General Dynamics European Land Systems (March 2026); US DOE and DoD via Alpha Safety.
SITE	cadre-holdings.com

WHAT IT MEANS FOR TWB

COMPARABLE and ACQUIRER — and the empirical rebuttal to the deck's 1.2x assumption. Cadre's realised acquisition economics across five deals: Cyalume 1.40x revenue, ICOR 2.31x, Alpha Safety 2.42x, Carr's 1.47x, TYR 1.89x. **Blended ~1.86x; range 1.40x–2.42x; never once at 1.2x.** It trades at 2.50x revenue and buys at ~1.9x — a 0.6x spread that only works because the acquirer already carries a premium multiple. TWB, pre-scale and unlisted, will not carry 2.5x, so buying at 1.9x into a 5–8x EBITDA private multiple is multiple-neutral to dilutive.

ICOR Technology Inc.

T6 / 02

Wholly owned subsidiary of **Cadre Holdings** since 10 January 2024; operates under the Safariland brand family.

YEARS IN BUSINESS	Incorporated 2005 — 21 years
HEADQUARTERS	Ottawa, Ontario, Canada — 935 Ages Drive. Sited deliberately adjacent to DND and RCMP national headquarters.
OPERATING MARKETS	Products in use in 60+ countries. Military EOD, police bomb squads, SWAT, CBRNE teams.
REVENUE	CAD ~\$26M for FY ending 31 July 2023, disclosed by Cadre at announcement. Acquisition price CAD 60M aggregate (~CAD 52M cash at closing) — 2.31x revenue . Earn-out clawback if ICOR fails to reach CAD 86M cumulative revenue over three years.
SERVICES	CALIBER® EOD and tactical robot line (MK4, MK3, Flex, T5, Mini), EOD/IEDD tools, remote firing systems, search equipment, portable X-ray. 27,500 sq ft in-house manufacturing. ISO 9001:2015; tested by NIST, DHS, NTOA.
CONTRACTED WITH	Not individually disclosed; global law enforcement and military. Described as a national training standard in some police training programmes.
SITE	icortechnology.com

WHAT IT MEANS FOR TWB

The single most instructive precedent in the whole set. A ~CAD 26M-revenue Ontario EOD-sector business bought by a US-listed roll-up at 2.31x revenue, with an earn-out clawback attached. That is the closest available proxy for what a Canadian EOD-adjacent business of TWB's eventual scale is worth to a strategic buyer — and it sets the price TWB would have to pay for comparable Canadian assets.

Czechoslovak Group (CSG)

T6 / 03

Public since January 2026 — **Euronext Amsterdam**. Controlled by Michal Strnad. IPO raised ~€3.8bn.

YEARS IN BUSINESS	Founded 1995 as Excalibur Group; CSG structure from 2014 — 12 years.
HEADQUARTERS	Prague, Czech Republic.
OPERATING MARKETS	Europe, North America, MENA, Asia. NATO and allied armed forces, US Army, commercial ammunition market.
REVENUE	FY2025 revenue €6.7bn , +71.7% (+30.1% pro forma); adjusted operating EBIT €1.6bn (24.1% margin); net profit €872M; backlog €15bn , pipeline €27bn; net debt €3.0bn at 1.7x LTM adjusted operating EBITDA.
SERVICES	Medium- and large-calibre ammunition, small-arms ammunition (The Kinetic Group: Federal, CCI, Remington, Speer; Fiocchi) , artillery, military vehicles, aerospace, radars — and ammunition demilitarization and disposal through MSM Group .
CONTRACTED WITH	Czech MoD, Ukrainian MoD, NATO members. MSM Group North America launched January 2025 , HQ St. Petersburg FL, targeting the US Munitions Industrial Base.
SITE	csg.com

WHAT IT MEANS FOR TWB

COMPARABLE, ACQUIRER, and the strategic threat. CSG is executing exactly the buy-and-build the deck proposes — vertically integrated from small-arms manufacture through demil, at €6.7bn of revenue and a €15bn backlog — and it arrived in North America eighteen months ago. It bought The Kinetic Group for \$2.15bn in July 2024. Any North American demil asset TWB bids on may face this balance sheet.

Veolia · Enviri · Clean Earth

T6 / 04

Veolia Environnement SA (Euronext Paris: VIE). Enviri Corporation (NYSE: NVRI), formerly Harsco, founded 1853.

YEARS IN BUSINESS	Veolia lineage to 1853 — 173 years. Enviri renamed 2023.
HEADQUARTERS	Veolia North America: Boston, Massachusetts, USA. Parent: Paris, France. Enviri: Philadelphia, Pennsylvania, USA.
OPERATING MARKETS	North America, Europe, Latin America, Asia-Pacific. Industrial, municipal, healthcare, retail, government.
REVENUE	Enviri FY2025 total \$2.24bn ; adjusted EBITDA \$275M; Clean Earth segment \$973.9M . Veolia's US hazardous waste division ~\$1bn annually, moving to ~\$2bn on completion of the Clean Earth deal.
SERVICES	Hazardous and specialty waste treatment and disposal, contaminated soil and dredged-material processing, hazardous-waste incineration (Port Arthur, Texas — among the largest in North America). Neither publishes munitions, ammunition or explosive-ordnance demilitarization as a service line. They are downstream disposal for demil-derived hazardous waste, not demil contractors.
CONTRACTED WITH	Not disclosed at segment level.
SITE	veolianorthamerica.com

WHAT IT MEANS FOR TWB

Veolia agreed to acquire Clean Earth from Enviri for \$3.04bn in November 2025, closing June 2026 — the sector's most significant consolidation event, taking Veolia to second-largest US hazardous-waste provider. It is also the cleanest recent multiple in the set: **3.12x segment revenue and 9.8x 2026E post-synergy EBITDA**. Do not list either company as a demil competitor — but do use the transaction as a price anchor.

Perma-Fix · Onterris (formerly Montrose) · American Battery Technology

T 6 / 05

All public — **NASDAQ: PESI**, **NYSE: ONT** (rebranded from Montrose, NYSE: MEG, 2026), **NASDAQ: ABAT**.

YEARS IN BUSINESS	Perma-Fix founded 1990 — 36 years; Montrose 2012 — 14 years; ABAT 2011 — 15 years.
HEADQUARTERS	Atlanta, Georgia · Little Rock, Arkansas · Reno, Nevada, USA.
OPERATING MARKETS	Perma-Fix: US DOE, DoD, commercial nuclear. Onterris: US, Canada, Australia across nine sectors. ABAT: United States, EV and battery OEMs.
REVENUE	Perma-Fix FY2025 \$61.7M , net loss \$13.8M; EV \$330.6M, EV/Revenue 5.78x , EBITDA negative. Onterris FY2025 \$830.5M , +19.3%; adjusted EBITDA \$116.2M; EV \$966.8M, EV/Revenue 1.24x , EV/EBITDA 16.38x . ABAT FY2025 \$4.3M revenue, TTM \$16.28M, net loss TTM \$63.59M; EV \$313.1M, EV/Revenue 19.23x .
SERVICES	Perma-Fix: nuclear, low-level radioactive, mixed and hazardous waste treatment; D&D; PFAS destruction; Hanford programme. Its FY2025 results contain no mention of munitions or explosives — it is not a demil competitor. Onterris: environmental testing and laboratory analysis, remediation, permitting, emergency response. ABAT: lithium-ion battery recycling and primary lithium extraction.
CONTRACTED WITH	Perma-Fix: DOE Hanford and Oak Ridge, US Navy, commercial nuclear utilities. ABAT: US Department of Energy \$144M grant.
SITE	perma-fix.com

WHAT IT MEANS FOR TWB

Three warnings in one card. **Perma-Fix** is the most honest valuation anchor for TWB's story — a ~\$60M permitted-destruction business, loss-making, trading at 5.8x revenue on permit scarcity rather than earnings, whose Services segment fell 31% in a year on government procurement delays. **Onterris** built itself through ~90 acquisitions, paused acquiring entirely through 2025, and now trades at 1.24x revenue — **below the price at which acquisitions in this sector actually clear**. **ABAT's** 19x revenue multiple is a story-stock number attached to a business losing \$64M a year; it cannot justify a valuation for anyone and should be flagged wherever it appears in the deck's comp set.

The PE platforms — EQT · Banyan · Solix · Gage AB · Venterra

T6 / 06

EQT Infrastructure VI (EQT AB, Nasdaq Stockholm) holds Arcwood Environmental. **Banyan Growth Partners** (Holladay, Utah, formed 2003) holds EnviroSafe Demil. **Solix Group AB** (Copenhagen/Malmö/Stockholm) holds Igne and SafeLane Global across a 14-company portfolio. **Gage AB** — Charles Diggs' holding company — owns Dynasafe. **Venterra Group** is backed by General Atlantic and First Reserve.

YEARS IN BUSINESS	Banyan formed 2003 — 23 years. EQT stake in Heritage/Arcwood from 2024. Solix acquired Dynasafe International 1 August 2017.
HEADQUARTERS	Stockholm · Holladay, Utah · Copenhagen and Malmö · Sweden · UK.
OPERATING MARKETS	North America and Europe. Industrial waste, munitions response, UXO clearance, offshore energy services.
REVENUE	Portfolio-level, not disclosed. Arcwood invested \$80M of capital in 2025 on facility upgrades. Banyan's mandate is \$1M+ EBITDA with equity cheques of \$5–20M+. General Atlantic and First Reserve put a reported ~£150M into Venterra.
SERVICES	Not operators — capital. Between them they own the two most dangerous Tier 1 and Tier 3 competitors (EnviroSafe and Arcwood), the category's benchmark chamber vendor (Dynasafe), and the UK UXO consolidator (Igne / SafeLane).
CONTRACTED WITH	Via portfolio companies — see the individual entries.
SITE	banyangrowthpartners.com

WHAT IT MEANS FOR TWB

The competitive set is now almost entirely institutionally owned, and TWB would be bidding against prime balance sheets for assets whose realistic profile is 60–65 staff and financial distress. EQT took Arcwood and Arcwood took EBV out of General Dynamics; Diehl took Tauber and EST Energetics; Rheinmetall absorbed Expal; Cadre took ICOR; Veolia took Clean Earth. Two assets fitting the deck's target profile precisely — Tauber (~€100M, ~700 staff) and EST Energetics — were taken off the market during the period under review.

The acquirable set — El Dorado · Gradient · Black Tusk · ESI · USA Environmental · GunBusters

T6 / 07

All private and independent. El Dorado Engineering: S-corp, founded 1981. Gradient Technology: S-corp, founder-held since 1994. Black Tusk Geophysics: Canadian, 2012. ESI: veteran-owned, c. 1987. USA Environmental: certified small business, 1998. GunBusters: private, licensee network.

YEARS IN BUSINESS	45 · 32 · 14 · 39 · 28 · 11 years respectively.
HEADQUARTERS	West Jordan UT · Elk River MN · Vancouver BC · Baton Rouge LA · Oldsmar FL · Chesterfield MO.
OPERATING MARKETS	US DoD and allied governments, except Black Tusk (US DoD via Canadian base) and GunBusters (US law enforcement only).
REVENUE	None disclose revenue. USA Environmental sits on a \$960M-ceiling vehicle via the USAE-CAPE JV. GunBusters has destroyed 250,000+ firearms for ~1,000 agencies. Assume sub-\$20M for all six.
SERVICES	See individual entries in Tiers 3 and 5 for the full service descriptions. In target terms: El Dorado brings transportable furnace design plus RCRA permitting and air modelling; Gradient brings fielded waterjet cut-and-washout and an expired patent that needs no licence; Black Tusk brings a hard-to-replicate DAGCAP accreditation and owned sensing software; ESI brings proven mobile contained-burn execution under regulatory scrutiny; USA Environmental brings the contract vehicle; GunBusters brings ~1,000 agency relationships and a damaged brand.
CONTRACTED WITH	See individual entries.
SITE	eldoradoengineering.com

WHAT IT MEANS FOR TWB

Ranked: El Dorado first — best technology fit, 45-year independent S-corp, high prior probability of ownership transition, and the permitting expertise TWB needs in every jurisdiction. **Gradient second** — the real Year-1 counterparty, founder-dependent after 32 years, with the diligence question being how much capability sits with Goetsch personally. **Black Tusk third** — Canadian, complements Hamilton, accreditation is the asset, but almost certainly far below the deck's \$15–20M-per-acquisition assumption. **GunBusters last, or not at all:** acquire only as an asset and brand purchase at distressed value, because its free-destruction model is cross-subsidised by parts resale — the exact practice that collapsed it — and that revenue line must be assumed to go to zero.

The acquisition map

The re-cut target set: large-calibre and artillery demil, materials recovery, and the engineering houses that build the plant. Direct small-arms and law-enforcement competitors have been removed from the target list — they are covered in Tiers 1 and 4 as what they are.

JAKUSZ Sp. z o.o. TARGET · 1st

T7 / 01

Private, founder and family held. Owner **Bogdan Jakusz**; the business descends from his father's safe-manufacturing firm in the 1940s and converted from sole proprietorship to limited company in 2013. Share capital PLN 3,750,000. No PE, no prime.

YEARS IN BUSINESS	Established 1985 — 41 years; trading roots to the 1940s
HEADQUARTERS	Kościerzyna, Pomeranian Voivodeship, Poland — ul. Przemysłowa 40. Single site.
OPERATING MARKETS	Poland plus exports — delivered projects in Asia, Central Europe, North Africa and the Middle East, and research contracts with the European Space Agency on rocket propellants and oxidisers.
REVENUE	Not disclosed. No filed figure located. Indicative €10–25M [est.] from four product divisions, international plant deliveries and ESA research contracts — low confidence; Polish KRS filings should be pulled.
SERVICES	Designs, manufactures and delivers complete ammunition disposal factories in stationary or containerised form . Coverage: conventional ammunition 5.45mm to 203mm , mortar ammunition to 240mm , plus specialised ammunition, rockets, mines and air-launched ordnance. Four process lines — disassembly for medium and large calibre; materials processing and recycling into civil reuse; thermal destruction; detonation destruction. Adjacent lines in explosion-proof containment vessels and specialised chemical technologies. Both containerised/mobile and fixed-plant variants .
CONTRACTED WITH	Not individually published. References Polish military research institutes, the ESA, and delivered plants across four regions. Appears in NATO SALW trust-fund and TED procurement contexts.
SITE	jakusz.com

WHAT IT MEANS FOR TWB

The single best fit in the whole scan. An owner-named engineering house that designs and builds the exact plant needed to move up-calibre — and does it in containerised form, which is TWB's own business model two calibre bands up. Succession signal is explicit: named after and owned by one man, already second generation, legal form converted in 2013. Poland screens defence FDI and Canada is allied, so this is a filing; the real risk is the political sensitivity of a Polish defence SME going foreign-owned.

Wtórplast — the Merkury demil line

CARVE-OUT ONLY

T7 / 02

Private Polish group; Wtórplast S.A. incorporated 2010 as holding. Ownership names not confirmed. **Distress flag:** a related registered entity, ZAKŁAD "WTÓRPLAST" SP. Z O.O. (KRS 0000117303), appears in the Polish registry as *w upadłości likwidacyjnej* — in liquidation bankruptcy. Which entity holds the demil assets must be established before any approach.

YEARS IN BUSINESS	Founded September 1982 as a plastics processor — 44 years; entered ammunition and ordnance disassembly 2007–08 — 18 years in demil
HEADQUARTERS	Bielsko-Biała, Poland. Group subsidiaries stated in Kazakhstan, Iraq, Slovakia and the Czech Republic.
OPERATING MARKETS	Poland, Central Europe, Central Asia and Iraq. Military stockpile holders and defence ministries.
REVENUE	Not disclosed. The group spans plastics recycling, metals recycling, battery separators, ammunition disassembly and tactical supply, so no consolidated figure would be demil revenue. No estimate offered — KRS filings required.
SERVICES	The Merkury modular containerised ammunition disassembly system. Coverage: artillery ammunition 30–155mm , small-calibre, anti-personnel and anti-tank mines, naval mines, torpedo warheads and rockets. Mechanical pull-apart with separation of propellant, fragmenting material, brass and steel scrap, fuzes and tracers; recovered energetics routed to ammunition re-manufacture or to mining and blasting explosives. Rotary-kiln thermal utilisation with exhaust filtration for stock uneconomic to disassemble. Stated throughput ~500 rounds of 100mm tank ammunition per 8-hour shift per line , modular and duplicable. Mobile — explicitly designed to deploy to ammunition storage depots to avoid transport risk.
CONTRACTED WITH	Not publicly named. Group holds AQAP 2120:2009 (NATO quality), ISO 9001, ISO 14001. Poland's "Lider Bezpieczeństwa Państwa" award three times, 2014–16.
SITE	wtorplast.pl

WHAT IT MEANS FOR TWB

Technically the closest match anywhere to TWB's own model — a containerised deploy-to-depot line, for artillery instead of small arms. But the diligence risk is high: a same-name entity is in liquidation bankruptcy, the demil business sits inside a diversified plastics group, and the Iraq and Kazakhstan subsidiaries import end-user, sanctions and Canadian export-control exposure a Hamilton buyer would inherit.

Approach as a technology and line carve-out, never a whole-group purchase.

ZEVETA AMMUNITION a.s.

CARVE-OUT ONLY

T7 / 03

Private Czech industrial holding. **ZEVETA Bojkovice, a.s. is sole named shareholder.** Board member Ing. Tomáš Hrádek since 2014. Ultimate beneficial owners of the holding not established. Not PE-owned, not inside CSG or a prime.

YEARS IN BUSINESS	ZEVETA Bojkovice established 1936 — 90 years; ZEVETA AMMUNITION a.s. incorporated 4 January 2005 — 21 years
HEADQUARTERS	Bojkovice, Zlín Region, Czech Republic — Tovární 532. Single main campus, ~8,000 m² of production. Sister division ZEVETA MACHINERY a.s.
OPERATING MARKETS	Global — approximately 84% of revenue exported . Militaries and security forces internationally, plus civil pyrotechnics; government and civil delaboration clients.
REVENUE	CZK 572.5M revenue and CZK 254.8M net profit in the most recently reported year, up from ~CZK 335M / ~CZK 139M the prior year (filed accounts, reported by Hrot24). 52 employees at the Ammunition division; 526+ across the ZEVETA Bojkovice holding.
SERVICES	Manufacture of grenades (universal, anti-tank, thermobaric, smoke), ammunition, military pyrotechnics, decoys, impact fuzes, igniters, signal and illumination rounds — plus delaboration , the disposal of ammunition and pyrotechnics for government and civil customers, marketed as "maximum autonomy in the ecological liquidation of delaborated materials." Fixed-site. Calibre ranges and named processes for the delaboration line are not published and must be established by direct contact. ISO 9001 and IATF certified.
CONTRACTED WITH	Czech Army and Czech law-enforcement units named as delaboration clients; export customers not itemised.
SITE	zeveta.cz

WHAT IT MEANS FOR TWB

Financially the healthiest independent found — 45% net margin, doubling profit, no PE or prime owner. That is also the problem: **it is not distressed and does not need to sell**, and at CZK 255M of profit the price will be set by the grenade factory, not the demil line. The realistic play is a partnership or a carve-out of the delaboration line. Note the Czech market is being consolidated hard by CSG and STV, so ZEVETA is likely a target for *them* — which raises the price and shortens the window.

Artillerie Inrichtingen Armaments B.V. — REAS OTS

VERIFY BEFORE APPROACH

T7 / 04

Private Dutch company, founder-led. **Gerard Zondervan** (b. 1963), CEO and founder, mechanical engineer; **Michael Zondervan** (b. 1991) GM of the Oil & Gas division — visible family succession. Advisory board includes two retired Dutch general officers, one a former MIVD director.

YEARS IN BUSINESS	Current corporate form registered 1 March 2022 — 4 years. The company claims heritage "dating back to 1679" via the historic Artillerie-Inrichtingen name; that is brand heritage, not corporate continuity.
HEADQUARTERS	Tilburg, Netherlands — Technopol 4.
OPERATING MARKETS	Netherlands and NATO. Stated partners include RTX, Rafael, TNO, Dutch military units and government agencies.
REVENUE	Not disclosed. No public revenue or headcount for the KVK entity. No estimate offered — the entity is young and its registered activities include sports shooting and defence-weapons trade, so demil revenue is unproven.
SERVICES	Advertised as full life-cycle demil: de-linking, defuzing, pull-apart disassembly, sawing, aircraft flare disassembly, ICM round processing, cluster bomb unit disassembly, and MLRS rocket motor and warhead dismantling. Munition classes claimed: bulk propellants, separate-loading propelling charges, HE improved conventional munitions, HE D-loaded munitions, pyrotechnics, fuzes, HE-filled bombs, cartridges and projectiles. Recovery of propellant for blasting use, plus metals, plastics, packaging and magnesium for resale. Fixed-site claimed at Tilburg. No permits published.
CONTRACTED WITH	No demil contracts publicly named.
SITE	ai-armaments.com

WHAT IT MEANS FOR TWB

Profile with a health warning. On paper the capability list is the best match in Europe to what the platform needs — bombs, warheads, MLRS motors, separate-loading charges, fuzes, propellant reclamation. In substance this is a company registered in 2022, with no published demil contracts, throughput or permits, and a 1679 heritage claim that is marketing. It may be a genuine capability build or it may be a brochure. **Site visit and permit inspection before any further work.** If the Tilburg plant runs those lines it is a top-three target; if it does not, it is nothing.

Private Croatian limited company. Registry shows **Davor Ljevar as sole member and board president**; the company's own site describes Spreewerk Lübben GmbH as a German "parent company." **The equity relationship is unresolved and must be settled first** — if Spreewerk controls it, this sits inside Tier 2 and is not available.

YEARS IN BUSINESS	Founded 2007 — 19 years. Classified as a small enterprise, active status.
HEADQUARTERS	Gospić, Lika-Senj County, Croatia — the Podoštra factory, described as the first facility of its type in Croatia. Registered primary activity: manufacture of explosives.
OPERATING MARKETS	Croatia and international stockpile reduction. Establishment supported by the City of Gospić, Lika-Senj County, the Croatian Ministry of Defence and national government.
REVENUE	Not disclosed — Croatian filed figures are paywalled. Statutory small-enterprise classification caps revenue under €10M [est.] .
SERVICES	Industrial demilitarization of ammunition, safe disposal of munitions, and recycling of energetic materials and white phosphorus . States it processes "all types of conventional ammunition of various calibres." Named processes not published. Fixed-site. EN ISO 9001, EN ISO 14001, ISO 45001.
CONTRACTED WITH	Not publicly named. Croatian MoD involvement in the plant's establishment is stated.
SITE	demiltech.hr

WHAT IT MEANS FOR TWB

Small, single-owner, single-site, 19 years old — structurally very acquirable, and **white phosphorus processing is a genuinely rare capability** that most demil operators refuse to touch. Two blockers: resolve the Spreewerk ownership question first, and recognise that a single-owner Croatian small enterprise with no published customers or throughput is a thin operating asset — the value may be the licence and the site rather than the earnings.

Third-generation family-owned. All shares held by the Meissner family; **Dr Mirko Haendel serves as an employed, non-family managing director** — the standard precursor to a sale. Founded by Josef Meissner, then run by his sons.

YEARS IN BUSINESS	Founded 1926 — 100 years. Registered Cologne, HRA 5739.
HEADQUARTERS	Cologne, Germany. Plants delivered worldwide; more than 600 commissioned. Acquired the RHE synthetic-resin product group in 2015.
OPERATING MARKETS	Global — chemical plant construction, nitration and explosives industry technology, munitions disposal plant.
REVENUE	Not disclosed. German GmbH & Co. KG filings should be pulled from the Bundesanzeiger. No estimate offered.
SERVICES	Engineering, supply, erection and commissioning of complete munitions and explosives disposal plants: disassembly equipment breaking unserviceable ammunition into components with metal recovered as scrap; high-pressure waterjet cutting and washout for shells, bombs and rocket motors up to 203mm; explosive recovery — warm-water washout with direct TNT recovery, and recovery of high-quality HMX and RDX from mixed formulations; blasting chambers and incineration plant for detonators, fuzes and other initiating devices, pyrotechnic mixtures and propellants; wastewater treatment stripping explosives from demil effluent. Fixed-site plant design and build.
CONTRACTED WITH	Not itemised publicly; 600+ plants commissioned globally across the chemical and explosives industries.
SITE	josefmeissner.com

WHAT IT MEANS FOR TWB

The European El Dorado, and the most attractive intellectual property in the set. **Explosive recovery — TNT, HMX, RDX — is exactly the capability that moves a platform from destroy to reclaim and resell**, which is where the US Army's own strategic plan is heading. A 100-year-old third-generation family firm that has already installed a non-family MD is a textbook succession situation. The caution that keeps it at second rather than first: explosives disposal is one product group inside a broad chemical-plant EPC business, so this is a carve-out negotiation and the parent is larger and pricier than the piece TWB wants.

Not disclosed. German Aktiengesellschaft, registered Lübeck HRB 4730 HL. Not listed on any exchange found and no PE sponsor identified.

YEARS IN BUSINESS	Founding year not disclosed; states "over 20 years experience in water jet cutting technology" — so founded c. 2005 or earlier [est.]
HEADQUARTERS	Lübeck, Germany — Hinter den Kirschkatzen 32.
OPERATING MARKETS	Germany and international; sells cutting systems to EOD, demil and industrial customers.
REVENUE	Not disclosed. No filed figures located; German AG accounts should be pulled from the Bundesanzeiger. No estimate offered.
SERVICES	Designs and builds MACE — Mobile Abrasive Cutting Equipment , a high-pressure abrasive waterjet system for cold, spark-free cutting of ordnance. Demonstrated on bombs up to 500mm body diameter and on an Mk 82 500 lb bomb, with radial cuts completed in under 25 minutes; also UXO and mixed ammunition designs. Enables safe segmentation for washout and recycling. Mobile — packaged into trailers or ISO containers . Equipment supply, not an operating service.
CONTRACTED WITH	Not publicly named; references and case studies exist but are not itemised.
SITE	ant-ag.com

WHAT IT MEANS FOR TWB

Small, specialist, no visible sponsor. Gives TWB an **owned waterjet cutting and bomb-opening capability in mobile form** — the natural first step up from a closed thermal chamber for small arms, and the cheapest route to it. Risks: a machinery company has lumpy project revenue, and Gradient is the entrenched US incumbent in demil waterjet. German AWV screening applies; Canada is an ally and this is a filing.

All private and US. **U.S. Demil** — founder-held, David J. Kautz, Member and CEO. **ARCTECH** — private small business, ownership not disclosed, long-standing DoD/DOE SBIR performer. **SAVIT** — private, founders not disclosed, member of the Munitions Industrial Base Task Force. None PE-owned or prime-owned.

YEARS IN BUSINESS	U.S. Demil founded 2009 — 17 years. ARCTECH founding year not confirmed. SAVIT founded 1996 — 30 years.
HEADQUARTERS	Buffalo, New York · Chantilly, Virginia · Rockaway, New Jersey (adjacent to Picatinny Arsenal, which explains the business model).
OPERATING MARKETS	United States. US Army demil programme, EPA and state remediation programmes, DoD armament programmes.
REVENUE	U.S. Demil: ~\$310,000 and ~4 employees per a commercial directory model — a technology licensor, not an operating company. ARCTECH: not disclosed. SAVIT: not disclosed; one publicly reported award of \$40,160,222 ; indicative \$20–50M [est.], low confidence.
SERVICES	Three technology and engineering options rather than platforms. U.S. Demil owns Decineration™ , a rotary-furnace thermal destruction process recognised in the EPA's 2019 review of OB/OD alternatives, and presented "Fuze & Landmine Demilitarization" at the NDIA Global Demilitarization Symposium. ARCTECH owns Actodemil® , an alkaline hydrolysis chemical destruction process, also EPA-recognised — a genuinely different pathway from thermal, and the one regulators favour where thermal is politically difficult. SAVIT is design-and-build: fuzing, systems integration, load-and-pack, CNC machining, additive manufacturing, electromechanical assembly, destructive and non-destructive testing — the firm that builds Ammunition Peculiar Equipment and robotic disassembly cells. ISO 9001:2015 and AS9100:2016.
CONTRACTED WITH	U.S. Demil and ARCTECH named as technology vendors in the EPA's December 2019 alternatives report and the National Academies' 2019 study; no production contracts located for either. SAVIT: US Army/DoD, one \$40.16M award reported.
SITE	arctech.com

WHAT IT MEANS FOR TWB

Buy these for know-how, not for revenue. **Fuze and initiator demil** is a gap almost nobody addresses and U.S. Demil has the federal technical recognition for it; ARCTECH's alkaline hydrolysis is the non-thermal hedge — note MuniRem is the more commercially advanced competitor in that same niche. **SAVIT is the hardest deal in this brief for a Canadian buyer**: a Picatinny-embedded armaments engineering firm with cleared personnel is exactly the CFIUS profile that draws scrutiny, and its public marketing now leans to manufacture rather than demil, so the demil content may be historical.

Private, closely held. Founded and run out of St. Louis; specific shareholders not disclosed. **No PE or strategic parent identified.**

YEARS IN BUSINESS	Founded 1996 — 30 years
HEADQUARTERS	St. Louis, Missouri, USA. Three sites: Madison, Illinois (40-acre non-ferrous yard); Edwardsville, Illinois (electronics and battery); St. Louis commercial office.
OPERATING MARKETS	North America. Firing ranges, gun stores, ammunition manufacturers, government entities, commercial scrap generators and e-scrap.
REVENUE	Not disclosed. States it processes more than 10,000 tons (20 million pounds) of non-ferrous scrap every month and up to 75 straight loads — more than 1,500 metric tons — in a day. Headcount not disclosed.
SERVICES	Buys and processes spent brass shells and cartridges, indoor and outdoor range lead, and demilled military ordnance, tactical munitions and artillery shells — the most explicit "we buy demilled ordnance" commercial scrap position found anywhere in this research. R2v3, ISO 9001, ISO 14001, ISO 45001 (Edwardsville). RCRA and ATF status not disclosed; no DLA Disposition Services contract disclosed.
CONTRACTED WITH	Not disclosed.
SITE	recyclerangelead.com

WHAT IT MEANS FOR TWB

Converts destruction output from a disposal cost into a priced, oftaken revenue line on day one — including the ability to segregate and monetise copper gilding metal on copper content rather than dumping it into mixed brass, which is real margin nobody indexes. It also brings the DLA-lot buying relationships TWB cannot replicate. Thirty years old, founder-era, three sites, no PE parent, and the RecycleRangeLead brand shows ordnance feedstock is already a marketed product line rather than an accident. Classic succession window.

MT2, LLC — Metals Treatment Technologies

TARGET

T7 / 10

Private, independent LLC. Owner not publicly disclosed. No PE parent identified.

YEARS IN BUSINESS	Founded July 2000 — 26 years
HEADQUARTERS	Arvada, Colorado, USA. Seven operating bases: Arvada, Chicago, Sacramento, New York, Heathsville VA, Orlando, Fort Worth.
OPERATING MARKETS	All 50 states. DoD installations, federal and state law enforcement, municipal and commercial ranges, environmental remediation clients. 2,500+ clients.
REVENUE	Not disclosed. Discloses 10,000,000+ tons of hazardous soil and debris processed and \$500M+ in claimed client savings. Indicative \$25–60M [est.] from seven staffed bases plus a GSA Schedule and self-performed crews — wide band, no public filing exists.
SERVICES	Firing-range lead reclamation and "lead mining" of berms and bullet traps; indoor range cleaning; soil-lead remediation and stabilisation; range construction and design-build; laboratory services. Exclusive provider of the EPA-approved ECOBOND® lead stabilisation technology — a genuine moat, since stabilised soil can be delisted from hazardous classification. GSA Schedule contractor; SDVOSB alliance partner; certified industrial hygienist on staff; \$10M general and pollution liability; states zero OSHA and EPA violations.
CONTRACTED WITH	GSA Schedule (task order values not disclosed). Individual client names not disclosed.
SITE	mt2.com

WHAT IT MEANS FOR TWB

The most natural operational bolt-on in the recovery segment — same regulated material, same customers, same permit posture — and the fastest route into US federal range work. Twenty-six years old and founder-era, at a natural succession point, with seven bases so no single-site risk. **One diligence item is decisive: establish whether MT2 owns or merely licenses ECOBOND, and whether that licence survives a change of control.** A terminable exclusive licence would gut the value.

Lacero Solutions Inc.

TARGET · 5th

T7 / 11

Private, **founder-held and "proudly Canadian owned and operated."** CEO Tim Johnston (P.Eng, CFA); directors Brad Morris (corporate lawyer) and Erez Ichilov (critical minerals). No PE or strategic parent.

YEARS IN BUSINESS	Established 2018 — 8 years
HEADQUARTERS	Mississauga, Ontario, Canada — 2351 Royal Windsor Drive. Roughly 45 minutes from Hamilton.
OPERATING MARKETS	Canada. Automotive OEMs and Tier 1 suppliers, dealers, recyclers, waste companies.
REVENUE	Not disclosed. Discloses ~550,000 units processed to date and over 1.1 million pounds of reusable material recovered , a claimed 100% diversion rate, and up to 30% reduction in customer waste and storage costs.
SERVICES	Deactivation of recalled airbag inflators , deployment of seatbelt pretensioners, recycling of full airbag modules, barcode-level tracking with certificates of destruction , secure storage and pickup. This is pyrotechnic-device destruction with certified chain of custody and materials recovery — structurally the same competence as ammunition destruction, applied to a completely different customer base. Canadian explosives and environmental authorisations not published; verify Natural Resources Canada ERD authorisations in diligence.
CONTRACTED WITH	Honda, GM, Mercedes-Benz, Toyota Boshoku Canada, Lear Corporation, Leggett & Platt, Veolia — named on the company site. Values not disclosed.
SITE	lacersolutions.com

WHAT IT MEANS FOR TWB

The best Canadian fit in the entire scan and the one to move on first. Same regulatory competence, same certificate-of-destruction workflow, same materials-recovery logic — but a blue-chip commercial customer base that is completely non-overlapping with defence, which diversifies away from government budget cycles. A director is already a critical-minerals specialist, so the sellers think in TWB's terms. Same province, small cheque. Founder dependence and a single Mississauga site are the risks.

Clean Water Environmental, LLC

VERIFY BEFORE APPROACH

T7 / 12

Private. Ownership not disclosed. No PE parent identified.

YEARS IN BUSINESS	Not disclosed. Publishes a historical airbag disposal note dated January 2021, indicating a multi-year track record.
HEADQUARTERS	Dayton, Ohio, USA.
OPERATING MARKETS	United States. Automotive OEMs and recall programmes, industrial waste generators.
REVENUE	Not disclosed. Headcount not disclosed.
SERVICES	Destruction and recycling of recalled airbag inflators. Critically, CWE holds a Class 3 modification to its RCRA Facility Part B permit allowing it to accept recalled inflators as reactive (D003) waste — a rare, hard-won and highly transferable permit position. Whether it also takes ordnance or general pyrotechnics is not disclosed and is the key diligence question .
CONTRACTED WITH	Not disclosed.
SITE	cleanwaterenv.com

WHAT IT MEANS FOR TWB

Rank this on the permit, not the revenue. A RCRA Part B with a reactive-waste Class 3 modification is the scarcest single asset found in this research — permits of that kind take years and are the binding constraint on any US energetics build. **If the D003 authorisation can be extended to ordnance-derived reactive waste, this stops being an airbag business and becomes TWB's US platform permit**, and it jumps to the top three. Establish that before anything else.

Sanders Lead · Range Environmental Solutions · MEC Corporation

TUCK-IN

T7 / 13

All private and independent, none PE-owned. **Sanders Lead** (Troy, Alabama) — family or founder structure indicated by trade listings, not verified. **Range Environmental Solutions** (Houston) — owner not disclosed. **MEC Corporation** (Lanham, Maryland) — founder-held by Randy Smith, formerly of the EPA.

YEARS IN BUSINESS	Sanders Lead: not disclosed. RES: not disclosed. MEC: founding year not disclosed; principals claim 30+ years cumulative sector experience.
HEADQUARTERS	Troy, Alabama · Houston, Texas · Lanham, Maryland (deliberately positioned in the federal corridor).
OPERATING MARKETS	United States. Battery and lead-alloy customers; commercial indoor and outdoor ranges; military, government and law-enforcement installations.
REVENUE	None disclosed. Assume sub-\$5M enterprise value for RES and MEC; Sanders Lead is a permitted smelter and materially larger, but no figure is public.
SERVICES	Sanders Lead — secondary lead smelting and refining, Alabama Department of Environmental Management permitted. RES — buys spent brass and lead from shooting ranges, taking title to the metal rather than billing a service; hazardous waste disposal of filters, PPE, berm media and gunpowder waste; handles EPA and DOT documentation for the generator. MEC — firing-range maintenance and repair, lead and brass reclamation, environmental remediation, range construction consulting, laboratory services; HAZWOPER, lead awareness, respiratory and hazard-communication certifications.
CONTRACTED WITH	None publicly named. MEC states military and government installation clients without values.
SITE	rangeenvironmentalsolutions.com

WHAT IT MEANS FOR TWB

Three small route and permit tuck-ins with one strategic point between them. **RES has the right shape** — it buys the metal rather than billing for a service, which is exactly the model to bolt onto destruction. **Sanders Lead is the only realistic route to owning lead-antimony processing rather than renting it:** one of the last genuinely independent US secondary smelters, no PE parent, single site — high risk, start with the ADEM permit history and any consent orders. **MEC's asset is its founder's regulatory pedigree, and it walks out the door on close** unless there is multi-year retention.

Private, founder-family held and consolidated in one pair of hands. Alford Technologies Ltd (01914544) is 75%+ owned by Alford Technology Group Ltd (10767947), which is 75%+ owned by Roland Takeshi Alford (PSC notified 12 May 2017, still active). Dr Sidney Alford's PSC interest ceased 10 February 2021; he died 27 January 2021. An intermediate holding company ceased as PSC on 22 August 2023 — a restructuring worth diligencing.	
YEARS IN BUSINESS	Incorporated 17 May 1985 as "Sidney Alford", renamed 2004; underlying work from 1976 — 41 years
HEADQUARTERS	Trowbridge, Wiltshire, UK — Alford House, White Horse Business Park. Sister entity Alford Explosives Consultancy Ltd at the same address.
OPERATING MARKETS	Global. Military EOD units, police bomb squads, commercial EOD contractors and humanitarian demining organisations. Exclusive US distribution via Tactical Electronics.
REVENUE	Not disclosed. Filed as a small UK private company — abbreviated accounts, no turnover disclosure obligation. No estimate offered; there is no public basis for one.
SERVICES	Designs and manufactures the disposal tools that destroy ordnance in situ — a product business, not a service business. BootBanger and Vulcan/Pluton shaped and explosively-formed charges for rendering safe and destroying aircraft bombs, projectiles and IEDs ; Dioplex user-filled linear cutting charges; MiniMod and MLVD modular charges; Gladius off-route mine defeat; Vulcan Counter Limpet Mine System for maritime. Destruction happens wherever the customer is — in theatre, on the depot pad, underwater. Two Queen's Awards for Enterprise (2004, 2009).
CONTRACTED WITH	Supplies military and police EOD organisations internationally. The founder received the US Navy Distinguished Public Service Award (2021) and an OBE (2015), indicating deep US Navy EOD adoption. Named contracts and values are not public.
SITE	explosives.net

WHAT IT MEANS FOR TWB

The cleanest ownership situation found anywhere in this research. One individual holds 75%+ of the top company; the founder died five years ago; the second generation has been MD since 2002 and is 20+ years in; and the 2023 holding-company reshuffle is either succession planning or transaction preparation. Additive because it lets TWB **render safe and destroy in place what the chamber cannot take** — bombs, large-calibre projectiles, underwater ordnance — and brings a global military and police customer list. Buy the group, not just the trading company. UK NSI Act notification applies; a Canadian buyer is a benign profile.

Not disclosed. Private French company; no PE or strategic owner identified in public material.

YEARS IN BUSINESS	Not disclosed
HEADQUARTERS	France — Var / PACA region. Deploys to client states.
OPERATING MARKETS	Sells directly to States — defence ministries and national authorities. Countries not named publicly.
REVENUE	Not disclosed. Headcount not disclosed. No estimate offered.
SERVICES	Explicitly offers ammunition stockpile destruction — missiles, aircraft bombs, sea mines, torpedoes and rockets. Scope covers technical evaluation of large stockpiles, risk analysis, blast-effect modelling, dismantling where nominal destruction is not possible, and destruction operations. Method is destruction in pits, in country, at the national depot , with limited open-air propellant burning; recommends protective measures including underground containers and trenches. Works to IMAS, IATG, STANAG and AASTP. Also UXO survey and clearance.
CONTRACTED WITH	Named programmes, donors and values are not public.
SITE	geomines-uxo.com

WHAT IT MEANS FOR TWB

One of very few commercial firms in Europe openly selling **in-country stockpile destruction to sovereign states** rather than construction-sector UXO survey — which is precisely the demand a mobile chamber addresses. And the commercial argument is unusually clean: **their pit-detonation and open-burning method is exactly the practice a closed chamber displaces**, so you acquire the customer relationships and upgrade the method. But the information vacuum is total — no ownership, no founding date, no financials, no named contracts. **Pull the French registry extract before spending any more time.**

Ramora UK — private, CEO David A. Welch; shareholder structure not verified, treat as founder or management held pending Companies House confirmation. GCS — owner-managed and founder-controlled, co-founders Philipp von Michaelis (CEO) and Markus Zurkirchen (CFO), no PE investor identified. HDC International — ownership entirely undisclosed; establish through the Ukrainian registry before any approach.	
YEARS IN BUSINESS	Ramora: founding year not confirmed. GCS: founded 2015 — 11 years. HDC: founded 2002 — 24 years, a genuine pre-war business rather than a post-2022 startup.
HEADQUARTERS	Portsmouth, Hampshire, UK · Freienbach, Switzerland with production facilities in Germany and nine offices worldwide · Ukraine.
OPERATING MARKETS	Ramora: UK primarily, training worldwide — emergency services, MoD, industrial and infrastructure, offshore. GCS: international. HDC: contaminated countries internationally, with NSPA, UN and OSCE customer relationships.
REVENUE	None disclosed. Ramora files UK small-company accounts. HDC has no public financials at all.
SERVICES	Ramora — commercial EOD as a 24-hour reactive service: land ordnance disposal including physical removal and destruction, maritime ordnance disposal using a proprietary Remote EOD System , disposal of degraded and unstable explosive substances, site remediation and Free From Explosive Hazard certification , certified training for governments. ISO 9001, 14001 and 45001 (UKAS), Achilles, JOSCAR, Cyber Essentials Plus. GCS — clearance systems and equipment, owner-managed with German production. HDC — clearance, EOD and canine detection with ISO 9001/14001, IMAS compliance and eight national accreditations plus global humanitarian mine action pre-qualification.
CONTRACTED WITH	Ramora: named contracts not public. HDC: NSPA (ex-NAMSA), UN and OSCE relationships — NSPA's supplier list is not public, so an existing relationship is the only reliable way in.
SITE	ramorauk.com

WHAT IT MEANS FOR TWB

Three access plays rather than capability plays. **Ramora** is one of the last independent UK EOD firms after the SafeLane/Igne consolidation, which makes it scarce and also means it is on other buyers' lists; the FFEH certification authority and the maritime system are the transferable assets. **HDC's value is accreditation** — national accreditations and NSPA standing are the two things a destruction platform cannot build quickly, and NSPA is the gateway to NATO-funded work. Against it: Ukrainian wartime diligence is the hardest legal file here — UBO, sanctions screening, martial-law constraints on share transfers and currency.

Private, **100% Canadian-owned**. Shareholders not disclosed. No PE parent.

YEARS IN BUSINESS	Founded 1995 — 31 years
HEADQUARTERS	Ottawa, Ontario, Canada.
OPERATING MARKETS	Canada, including remote deployment. Department of National Defence and Public Services and Procurement Canada .
REVENUE	Not disclosed. Team includes EOD specialists, IED experts, project managers, engineers, geophysicists and GPS/GIS technicians. Headcount not disclosed.
SERVICES	Explosive Ordnance Disposal and geophysics — UXO risk management, legacy site characterization, explosives clearance, geophysical survey. Describes itself as "Canada's leader in Explosive Ordnance Disposal" and as DND's primary contractor for UXO management on DND-owned property . Materials recovery is not a stated line — this is a clearance and characterization business, not a reclamation one.
CONTRACTED WITH	DND (primary UXO contractor) and PSPC. Contract histories public on CanadaBuys (EP077-087971/001/TOR~001; EN438-130016/001/TOR~000 and ~002). Also bid on PSPC solicitation W8486-217446/B — "Ammunition and Explosives Demilitarization and Disposal Services."
SITE	notra.ca

WHAT IT MEANS FOR TWB

Less a capability acquisition than a **contract-vehicle and clearance acquisition**. W8486-217446/B is precisely the Canadian vehicle a Hamilton demil platform needs, and a 31-year DND relationship plus security clearances cannot be bid into from a standing start. Thirty-one years old, Canadian-owned, founder-era. The gap it does not fill is materials recovery — pair it with Lacero or a metals reclaimer rather than buying it alone.

Vertrex — formerly Pentarch Industrial

TARGET

T7 / 18

Privately owned Australian company. Christopher Deighton, Director; Annie Bushnell, General Manager — second-generation management already in place. No PE or prime ownership found.

YEARS IN BUSINESS	Established 1984 as Pentarch Pty Ltd — 42 years (the AIDN directory says 1985; reconcile in diligence)
HEADQUARTERS	Southbank, Victoria, Australia. Operating sites: Oaklands, New South Wales (demilitarisation, 28,000+ m² secure warehousing) and Wangaratta, Victoria (ammunition packaging).
OPERATING MARKETS	Australia. Department of Defence, federal and state police, NSW Transport, Australian Border Force, Thales Australia, NIOA, and international vehicle manufacturers.
REVENUE	Not disclosed. 45+ staff. A predecessor entity won a A\$15M six-year ADF ammunition packaging contract in June 2020 . Indicative A\$15–30M [est.] from 45+ staff across three sites plus that contract; no filed accounts located.
SERVICES	Demilitarisation and disposal of ammunition, explosives, ordnance, marine flares and classified dangerous goods; ammunition packaging production and refurbishment. Named processes: Project Damocles — dismantling of artillery rounds with remote fuze interrogation ; WOLFF — a transportable waste-ordnance flashing furnace ; and a Dynasafe static detonation chamber already installed at Oaklands. Both mobile and fixed-site . Holds a Commonwealth licence to store and process government-owned ammunition — described as the only privately owned Australian facility so licensed — plus state EPA and explosives licences, ISO 9001:2015 and DISP accreditation.
CONTRACTED WITH	Australian Department of Defence (demil and packaging); Australian Munitions/Thales at Benalla; NIOA; Australian Border Force; the NSW marine flare programme (106,000+ flares); the Takata airbag recall (633,000+ units).
SITE	vertrex.com.au

WHAT IT MEANS FOR TWB

Outside the stated North America and Europe geography — included because it is the cleanest operating platform found anywhere. Additive on three axes at once: Damocles gives artillery dismantling with remote fuze interrogation, WOLFF is a mobile up-calibre thermal asset that plugs straight into TWB's model, and the Dynasafe chamber is already installed. **The Commonwealth licence is the moat and it cannot be replicated.** No CFIUS — the screen is FIRB, which for an allied acquirer is a filing. Heavy single-customer concentration on Australian DoD; succession is the open question and the reason to move.

Seven names to remove, and four to fix.

Carrying a company that does not do this work is the fastest way to lose a technical reader. Each of these appears in existing TWB material or in the sector's received wisdom, and each is wrong.

NAME	CURRENTLY TREATED AS	WHAT IT ACTUALLY IS
Chemring Group PLC	Demil competitor	A full-text search of the FY2025 Annual Report returns zero occurrences of demilitarisation, demil, ammunition disposal or munitions destruction. The “EOD” on their site is EOD <i>products</i> ; “Dem Stores” means demolition stores. The old Chemring Military Products unit was disposed of years ago. Remove.
Ordnance Holdings Inc.	Competitor	A UXO staffing, GIS, archival research and EOD-tools firm that also runs the UXOInfo industry news site. No chamber, no incinerator, no destruction capability of any kind. Remove or reclassify as industry media.
PIKA International	Competitor	A remediation contractor whose portable Thermal Convection System treats explosives <i>residues</i> on building materials and debris to reach MDAS certification — not ammunition. Reclassify.
Tradebe · Veolia	Competitors	General hazardous-waste operators. Neither publishes any explosives, reactive-waste, ammunition or munitions line. They are downstream disposal for demil-derived waste. Remove.
Perma-Fix	Competitor	Nuclear, radioactive and mixed waste. Its FY2025 results contain no mention of munitions or explosives. Keep it as a <i>valuation comparable</i> — a ~\$60M permitted-destruction business at 5.8× revenue is the most honest anchor in the set — but not as a competitor.
Esploidenti Sabino	Independent Italian target	No longer available. A business unit was acquired by Arca Defence Italy S.p.A. , the Italian vehicle of Turkey's ARCA Savunma , completing in 2025. Remove it from any target list — a subsequent Canadian approach would face a motivated foreign owner and an added layer of NATO-partner-but-non-EU ownership complexity.
Dynasafe BACTEC	A Dynasafe company	It became SafeLane Global in October 2018 and now trades as Igne , under Solix Group . Perusa sold Dynasafe International to Solix on 1 August 2017; the clearance arm split off in 2018; the demil-products side went to Charles Diggs' Gage AB. Dynasafe AB has had no ownership since 2017–18 , and the name-change record is on Companies House .

Four numbers and claims to fix in TWB's own materials

- **“\$3bn across the Army's 2026–27 demil awards” is roughly 10× over.** The real line is **\$155.1M (FY26) and \$161.2M (FY27)** — [budget line 4099EP1700](#), Procurement of Ammunition, Army, P-1 Line 36. It is also volatile: FY24 actual \$183.8M fell 26% to \$135.6M enacted in FY25. The Army's own [PM Demil briefing](#) (NDIA, 1 Oct 2025) plans conventional ammo demil at **~\$30M/yr competitive IDIQ for 2026–2030**.
- **The “\$808.8M Rock Island IDIQ” could not be verified in any public source.** Do not use it, even as a strawman, without a citation. The verifiable vehicle is the **\$110.1M** multiple-award demil IDIQ held by exactly three firms: EnviroSafe Demil, Expal USA and GD-OTS.
- **The “\$2.30B Hawthorne award” is a 20-year base-operations contract** to Day & Zimmermann running to 29 December 2046, in which demil is one of about fifteen work statements. Citing it as a demil award will be caught instantly — and it invites the reader to notice the Army just locked its largest small-arms demil venue away for two decades.
- **The stockpile is shrinking, not growing.** 303,772 short tons (FY25) against 513.5K twelve years ago, with FY25 execution of 1,464 tons. Kill the backlog demand driver; the real catalyst is EPA's [OB/OD rule](#) (89 FR 19952, proposed March 2024, not final) covering 67 RCRA facilities.

Every disclosed deal cleared above 1.2× revenue.

The ten-year plan prices acquisitions at 1.2× revenue. That figure is the 2025 environmental-services strategic-buyer *median* — a number spanning low-margin waste hauling, not demil, EOD or permitted destruction. Here is what actually traded.

DATE	TARGET	BUYER	EV	REVENUE	EV/REV	EV/EBITDA
Aug 2023	Expal Systems	Rheinmetall	€1.2B	~€400M	~3.0× [est.]	—
Jan 2024	ICOR Technology	Cadre Holdings	CAD 60M	CAD 26M	2.31×	—
Feb 2024	HEPACO	Clean Harbors	\$400M	\$270M	1.48× [est.]	11.1× / 7.1× post-syn.
Mar 2024	Alpha Safety	Cadre Holdings	\$106.5M	~\$44M	2.42×	—
Jul 2024	The Kinetic Group	CSG	\$2.15B	—	—	—
Apr 2025	Carr's Engineering Div.	Cadre Holdings	£75M	£51M	1.47×	—
Jul 2025	CTI	Parsons	Not disclosed	—	1.0×	10.0×
Oct 2025	Tauber Group	Diehl Defence	Undisclosed	~€100M	—	—
Jan 2026	TYR Tactical	Cadre Holdings	\$175M +\$25M earn-out	\$92.6M	1.89×	—
Jun 2026	Clean Earth	Veolia	\$3.04B	\$973.9M	3.12× [est.]	9.8× 2026E post-syn.
Jul 2026	EST Energetics	Diehl Defence	Undisclosed	—	—	—

What this does to the plan

- **The real band is 1.5×–3.1× EV/Revenue and roughly 9×–15× EV/EBITDA pre-synergy.** The lowest observed anywhere was Carr's at 1.47× and HEPACO at 1.48×. Recommended base case: **1.6×–2.2× revenue, with 2.0× central.**
- **At \$15–20M revenue per acquisition × seven acquisitions** = \$105–140M of acquired revenue. At the model's 1.2× that is \$126–168M of consideration. At a realistic 2.0× it is **\$210–280M**. The equity and debt plan has to be built against the second number — a 1.2× assumption understates required capital by roughly 40–65%.
- **Cadre — the deck's own template acquirer — has never bought anything at 1.2×.** Blended across five deals: ~1.86× revenue, range 1.40×–2.42×, median 1.89×. Kanders has publicly described deploying “over \$400 million in pursuit of this strategy” in twenty-four months.
- **The arbitrage is thin, not wide.** Cadre trades at 2.50× revenue and buys at ~1.9× — a 0.6× spread that only exists because the acquirer already carries a premium multiple. TWB, pre-scale and unlisted, will not carry 2.5×. Buying at 1.9× into a private multiple of 5–8× EBITDA is multiple-neutral to dilutive. **The re-rating comes from becoming Cadre, not from the deals.**
- **One caveat that cuts the other way.** The assets that cleared 1.5×–3.1× were \$44M–\$974M businesses with recurring contracts, permits or proprietary product. Sub-\$20M, project-lumpy, founder-dependent services firms — which is what most of the named targets actually are — typically clear at the low end and are usually priced on EBITDA (4×–7×) rather than revenue at all. The honest framing for an investor is not “1.2×” but **“4×–7× EBITDA for sub-\$20M founder businesses, rising to 9×–12× EBITDA or 1.6×–2.2× revenue for anything with a contract vehicle, a permit, or proprietary technology.”**

Still outstanding

- **EnviroSafe Demil's mobile deployment lead time.** Undisclosed, and it decides whether “same day, on site” survives contact in the US. The single most important open question in this brief.
- **Rheinmetall Expal's deployment time and throughput.** Published nowhere in current material. The highest-value single call to make in Europe.
- **Export-control, FCPA and CFPOA diligence.** Not covered here and still not run — the agent assigned to it in the August research programme hit a session limit.
- **Inciner8's filed UK turnover.** Retrievable from [Companies House abbreviated accounts](#) (no. 04866401, last accounts to 30 April 2025); not pulled in this pass.
- **HALO Trust FY2024/25 income and expenditure.** The filed PDF's Statement of Financial Activities is not machine-readable; only the FY2023/24 pair is quoted here.
- **Esplodenti Sabino FY2025.** The €469,888 figure comes from a registry aggregator and should be re-verified against the filed bilancio before use.

The primary documents behind this brief.

Every profile links to the company's own site. These are the filings, budget documents, award records and datasheets that the load-bearing claims rest on — the ones worth opening before a figure goes into an investor document.

DOCUMENT	WHAT IT ESTABLISHES
PM Demil briefing to NDIA Fuze & Firing Conference, 1 Oct 2025	The five commercial demil performers by name; ~\$30M/yr competitive IDIQ plan for 2026–2030; stockpile at 303,772 short tons and FY25 execution of 1,464 tons; the Army's own stated direction — “Closed Disposal Technologies to Replace Open Detonation and Open Burning” and “Demil as a Source of Supply.” The single most useful public document in this file.
Procurement of Ammunition, Army — FY2026 justification book · FY2027 P-1	The real demil budget: \$183.8M FY24 actual, \$135.6M FY25 enacted, \$155.1M FY26 request, \$161.2M FY27 request.
Dynasafe SDC datasheet (2023 revision)	“Deploys in three weeks” against the SDC 1000 mobility option, and 1,000 kg per shift. The competitor published the number TWB's first claim depends on.
DoD contract announcement, June 2026 — W519TC-26-D-A018	Hawthorne at \$2.301bn firm-fixed-price to 29 December 2046, scoped as operation, maintenance and modernization with demil as one work statement among about fifteen.
ACC–Rock Island \$110.1M demil MAC award, 21 May 2021	The three seats: EnviroSafe Demil, Expal USA, General Dynamics-OTS. Eight proposals received.
UNMAS RFIUNPD23632 · EOIUNPD23750	A named multilateral buyer specifying small arms ammunition to 12.7–13mm, 20-ft container transportable, 40 kg/hr minimum, 5–45°C — and asking for <i>mechanical</i> destruction under IATG 10.10 Level 2.
DoD DENIX — DAGCAP accredited organisations register	All sixteen accredited munitions-response contractors with certificate numbers and expiry dates, including Black Tusk Geophysics (A2LA 4275.01, to 31 July 2027).
Clean Harbors — explosives management · ProPublica, Colfax	The claim that Colfax is the only commercial RCRA Part B Subpart X permitted EOD facility in the US, and the ~1.7 million pounds burned in open air in a year that sits behind it.
US6777586B1	Gradient Technology's cut-then-selectively-dissolve patent — expired May 2023 . No licence is required for the process the Year-1 roadmap gestures at.
Companies House 02601923 · 03431843	The BACTEC → Dynasafe BACTEC → SafeLane Global → Igne name-change record, and the parallel MineTech line. Proof that Dynasafe AB has not owned either since 2017–18.
Cadre Holdings acquisition releases, 2022–2026	Cyalume, ICOR, Alpha Safety, Carr's and TYR — the five deals behind the 1.40×–2.42× realised range and the ~1.86× blend.
RL Hulett Environmental Services M&A Update, Q4 2025 · KippsDeSanto / Capital One MarketView Q4 2025	Sector multiple benchmarks: environmental strategic buyers at 20.9× EBITDA / 1.2× revenue in 2025; A&D and government technology services at 10.4×–14.5× EV/NTM EBITDA.
MAG annual report and accounts 2024 · HALO Trust 2024	Ten million rounds of small arms ammunition destroyed by one charity in a year, at £17,129 per head, running a deficit. The reason mine action is not a market.

Prepared August 2026. Figures are as at the most recent filing or award available at that date and will move. Where this brief and an existing TWB document disagree, section 11 states which is wrong and why.
